125

125 years of
energy leadership

125

Annual report to shareholders 2004

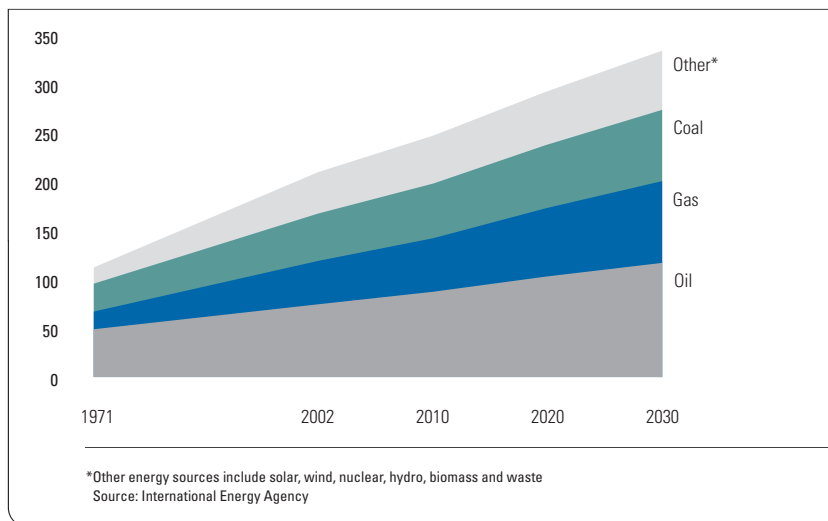

The importance of energy

- Energy is essential for world economic and social development.
- Hydrocarbons will remain a dominant source of the world's energy for a long time to come.
- Energy demand is rising worldwide, and new supplies of petroleum are required to meet this demand.
- Canada is uniquely positioned to participate in this growing market.

The International Energy Agency (IEA) has stated that oil and gas currently account for about 60 percent of all the energy consumed worldwide and, given the projected growth in demand, that is not expected to change significantly over the next few decades.

World energy demand grows 1.7 percent a year
millions of oil-equivalent barrels a day

This report contains forward-looking information on future production, project start-ups and future capital spending. Actual results could differ materially as a result of market conditions or changes in law, government policy, operating conditions, costs, project schedules, operating performance, demand for oil and natural gas, commercial negotiations or other technical and economic factors.

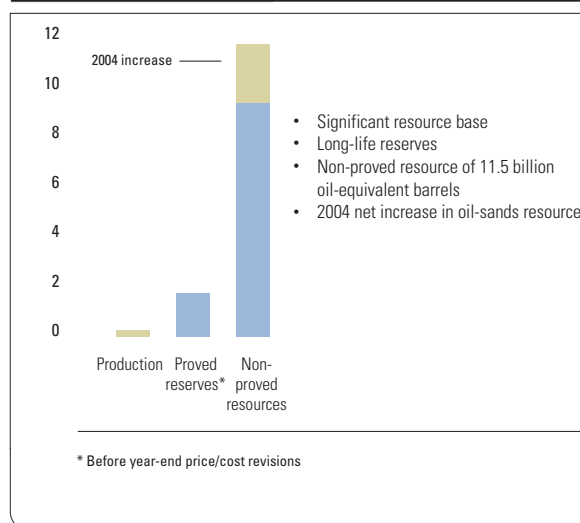

The Imperial Oil advantage

- The leading resource position in Canada with a diverse asset base
- A consistent management approach and a disciplined investment strategy
- A record of continually improving base operations
- Financial strength unparalleled in the industry
- A leader in the development and use of technology
- High-performing, principled employees
- Industry-leading return on capital employed
- Imperial has provided superior returns to shareholders – in 2004, the total return was more than 25 percent and has averaged almost 20 percent a year for the past 10 years.

Sustained increase in shareholder value 10-year cumulative total returns

Resource base an enabler for growth billions of oil-equivalent barrels – 2004

(d) Includes share appreciation and dividends.

Tim J. Hearn, chairman, president and chief executive officer

Letter to shareholders

Imperial's ongoing strategy is to increase long-term shareholder value by continually improving base operations while investing in attractive growth opportunities.

The company had another excellent year in 2004. A new record was set for earnings at \$2,052 million or \$5.74 a share, return on average capital employed was 28 percent and return on shareholders' equity was 35 percent. Regular per-share dividend payments increased for the 10th year in a row, and almost \$1.2 billion was returned to shareholders through dividend payments and the share-buyback program. The total return to shareholders including dividends paid and share-price appreciation was 25 percent.

Higher commodity prices and strong refining and petrochemical margins were major factors in Imperial's improved earnings. The company's operations were also solid. Safety performance was the best on record, operating reliability improved and record volumes were achieved in several areas. Looking ahead, because of the cyclical nature of the business, which is strongly influenced by the changing fundamentals of supply and demand, it would not be

prudent to expect 2004 prices and margins to be sustained over a long period. For this reason, Imperial's business model remains focused on sound financial management, a disciplined investment strategy and improving those things we can control.

The company maintained its strong financial position while making capital and exploration expenditures of more than \$1.4 billion. Major natural resources opportunities were advanced. A significant development drilling program was undertaken at our oil-sands operations at Cold Lake, Alberta; work on the major upgrader expansion at Syncrude was advanced; the main regulatory applications for the Mackenzie gas project were filed; and delineation drilling proceeded at the Kearl oil-sands site in northeastern Alberta. In petroleum products, work began on modifying refineries to produce low-sulphur diesel fuel to meet future regulatory requirements and further reduce smog-forming emissions.

Overall, Imperial is well positioned for long-term earnings growth. The company's diverse base of oil and gas resources in Canada, which exceeds 13 billion oil-equivalent barrels, is the largest in this country, and we have access to world-leading research, technology and project expertise. With these advantages, together with excellent financial strength, a consistent management approach and a disciplined investment strategy, I believe Imperial will remain an industry leader in both downstream and upstream operations for many years to come. Moving our head office to Calgary in 2005 will further strengthen the company's strategic focus, while improving organizational effectiveness and productivity.

Imperial's resources and capabilities will be key in producing new Canadian supplies of oil and gas. In the coming decades, economic and population growth are projected to increase significantly both global and Canadian demand for all forms of energy. Hydrocarbons will remain the dominant source of energy as well as the main feedstock for countless chemical products that are vital to modern life. Canada has abundant oil and gas resources, but developing them at acceptable costs and with minimal impact on the environment present challenges that must be addressed.

We are determined to continue to meet the evolving energy needs of Canadians while remaining committed to safety, environmental responsibility and the highest standards of ethics and integrity. This year marks the 125th anniversary of Imperial's founding, and those commitments have remained constant throughout the company's history.

Ensuring that nobody gets hurt governs all operations. And the company is committed to delivering superior environmental performance – to drive environmental incidents with real impact to zero, through the continuous raising of standards and improvements to our operations.

Imperial is also committed to maintaining the long-standing tradition of ethical business behaviour, including clear and straightforward reporting of operating and financial results. In particular, we remain fully confident in the integrity of our process for assessing and reporting oil and gas reserves. We will continue to make operating and investment decisions based on internal assessments of resources and their potential to provide future growth in production and earnings.

The company remains deeply committed to Canada and Canadians, and this is reflected in many of our initiatives. For example, we believe the key to the economic and environmentally responsible development of Canada's oil sands is to turn the best scientific minds to the challenge of developing new, innovative technologies. For this

reason, in 2004 Imperial committed to contribute \$10 million over five years to the University of Alberta to support oil-sands research.

Another major cornerstone of the company's success over its long history has been the collective talents, capability, dedication and extraordinary performance of our employees. For their steadfast willingness to meet the challenges of a difficult and competitive industry, they deserve the gratitude of shareholders for a job well done, every year.

I would also note that one of the longest-standing nonemployee members of Imperial's board of directors will not stand for re-election this spring. Pierre Des Marais II joined the board in April 1977. On behalf of his fellow directors, shareholders and employees, I want to express our appreciation for his many years of outstanding service to the company and wish him well for the future.

For the last 125 years, Imperial has grown and prospered by pursuing excellence in all operations, while meeting both the needs of Canadians for secure energy supplies and their expectations for good corporate citizenship. These considerations remain in the forefront as we move into a future of long-term growth for shareholders.

Tim J. Hearn
February 16, 2005

For the last 125 years, Imperial has grown and prospered by meeting the evolving energy needs of Canadians. We were here yesterday, and we will be here for the long term.

Year in review

Operating highlights

- The best recorded safety performance for both employees and contractors was achieved; the results showed improvement over the company's industry-leading record performance in 2003.
- Reliability in the company's operations was excellent. By actively managing those aspects under its direct control, Imperial continued to improve its base operations.
- Increased volumes were achieved in upstream and downstream business segments.
- Production records were set at the company's refineries and its polyethylene and aromatics plants in Sarnia.
- Substantial progress was made on major upstream projects, which are focused on developing oil-sands leases in Alberta, natural gas in the Mackenzie Delta region of the Northwest Territories and offshore resources on Canada's East Coast.
- Relentless pursuit of lower costs continued to be a priority. All key Imperial business units have either achieved industry-leading unit costs or are within first-quartile ranking for their cost structures.
- The company continues to maintain an industry-leading research program at its two research facilities in Sarnia and Calgary. Total research expenditures in Canada were \$38 million in 2004; three patents were awarded and 180 new or reformulated products were commercialized during the year. In addition, through its relationship with Exxon Mobil Corporation, Imperial had access to more than \$800 million of leading-edge research worldwide.
- In October, \$10 million was committed over the next five years to fund the Imperial Oil Centre for Oil Sands Innovation at the University of Alberta. The centre is dedicated to finding more efficient, economically viable and environmentally responsible ways to develop Canada's oil-sands resources.

From left to right:
Working at the Dartmouth, N.S., refinery; the company's oil-sands research facility in Calgary; delineation drilling at the Kearl oil-sands lease in northeastern Alberta; performing field work for the Mackenzie gas project.

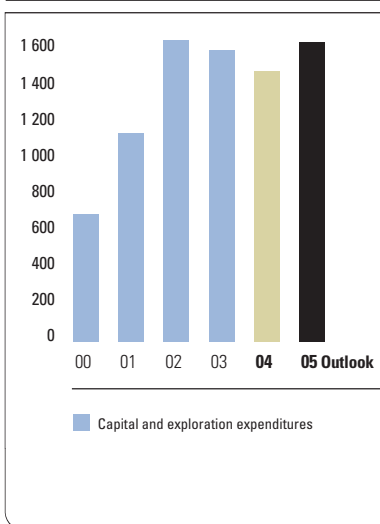

Financial highlights

- The highest earnings in the company's history were achieved, \$2,052 million, up from the record \$1,705 million in 2003. Earnings per share were \$5.74.
- Return on average capital employed continued at its pace-setting level in the industry – 28 percent, up from 25 percent in 2003.
- In 2004, the total return on shares, including capital appreciation and dividends, was more than 25 percent (TSX), exceeding the returns of Standard & Poor's (S&P) TSX composite index. Over the past 10 years, the total return on Imperial shares has averaged almost 20 percent a year.
- Regular per-share dividend payments increased for the 10th consecutive year.
- In 2004, total distributions to shareholders were almost \$1.2 billion, including \$872 million to buy back about 14 million shares.
- An exceptionally strong balance sheet was maintained. Debt as a percentage of total capital was below 20 percent; interest coverage was 83 times earnings and more than 100 times cash flow. The "AAA" rating on Canadian debt from S&P was maintained; Imperial remains the only Canadian industrial company with this rating. At year-end, the balance of cash was \$1,279 million.
- Capital and exploration expenditures for 2004 were \$1,445 million. Investments included advancing major upstream projects and funding significant refinery upgrades to reduce sulphur levels in diesel fuel, thereby further reducing smog-forming emissions. For the fourth consecutive year, more than \$1 billion was spent on capital expenditures and exploration. In 2005, the company expects to spend about \$1.6 billion, financed entirely from internally generated funds, with about \$1 billion to be spent in the upstream.

Long-term use of cash
 five-year total (2000-2004), \$10.9 billion

The company's Cold Lake development is one of the largest thermal heavy-oil-recovery operations in the world.

Natural resources

Imperial has a leading resource position with diversified holdings in Northern, Western and Eastern Canada. The company's total resource base, which includes reserves of oil, natural gas and natural gas liquids, was 13 billion oil-equivalent barrels at the end of 2004. These assets will provide the source for Imperial's future growth.

The upstream business continued its record of superior performance in 2004. Strong operations and excellent reliability contributed to a four-percent increase in production volumes for a total of 357,000 oil-equivalent barrels a day before royalties. Earnings after tax were a record \$1,487 million, and return on average capital employed was 39 percent. Cash flow from operating activities and asset sales was \$2.4 billion, of which about \$1.1 billion was reinvested in the business. Expenditures for 2005 are again expected to be more than \$1 billion, most of which will be directed to investment in the oil sands.

Oil-sands operations

With more than 460,000 acres of developed and undeveloped land holdings, the company has a significant lease position in the Alberta oil sands. More than \$800 million was invested in the oil sands in 2004 to increase production from existing operations and advance new projects. In addition, activities on the oil-sands leases, most notably delineation

Crude oil and NGL gross production by source
thousands of barrels a day

Natural gas gross production
millions of cubic feet a day

drilling at the company's leases at Kearn, will increase Imperial's non-proved resources by almost 2.5 billion barrels, bringing the company's total resource base to 13 billion oil-equivalent barrels.

Operations at Cold Lake contributed production of 126,000 barrels a day before royalties from about 3,800 wells. The production process for this thermal operation is cyclic by nature. At the beginning of a cycle, steam is injected into the subterranean reservoir to heat the bitumen until it flows. After a "soaking" period, the bitumen is produced. When production decreases, the cycle is repeated. Cycle times range from six

months for new wells to 36 months for mature wells. On average, annual production has increased about four percent a year since 1992, but variations in year-to-year production occur depending on the cycles. In the last quarter of 2004, production at Cold Lake averaged 144,000 barrels a day.

A development drilling program of more than 200 new wells from new pads was completed in 2004 at Cold Lake within the existing operating areas. In March, regulatory approval was received for operations in two new expansion areas, and drilling will begin in 2005 in one of these areas. Work was also completed in 2004 to

enhance the capacity of the operation, reduce unit operating costs and allow for additional development within the existing infrastructure before significant new investment is made at the site.

In 2004, following U.S. Security and Exchange Commission guidelines, oil and gas reserves were assessed using year-end pricing, which resulted in a downward adjustment in Cold Lake reserves. This was solely because heavy-oil prices were considerably lower on the last day of 2004 than they had been during most of the year. The company believes that the method of assessing reserves using a single price point does not accurately reflect the long-term production potential of the resource. Imperial does not use this single-price-point assessment in any of its operating or investment decisions. Bitumen values are highly variable due to a number of factors. Using either 2004 year-average pricing or average prices in early 2005, there would have been no downward adjustment to Cold Lake reserves.

Production from Imperial's 25-percent share in Syncrude operations was a record 60,000 barrels of synthetic crude oil a day before royalties in 2004, up from 53,000 barrels a day in 2003. This included production from the Aurora 2 mine, which was completed in 2003. Disappointingly, the cost estimates for the current upgrader expansion project were substantially increased in 2004, and the construction schedule was extended. A new coker, used to convert heavy oils into lighter

Natural resources

components, is expected to start operating in late 2005, with production of higher-quality synthetic crude oil to begin by mid-2006. Once complete, this expansion is expected to add an additional 27,000 barrels a day to Imperial's volumes. A team of experts from the project owners and Syncrude has taken intervention steps to ensure the remaining project work is adequately managed to achieve the updated cost target and schedule. At year-end, the project was tracking to the revised cost and construction schedule.

The company continued to evaluate its oil-sands opportunity at Kearn, 70 km north of Fort McMurray, Alberta. An initial drilling program was completed in early 2004. A second program began in December to further evaluate this high-quality resource. Imperial would hold a 70-percent interest and, if development is pursued, would act as operator in the potential joint project with ExxonMobil Canada. The property would be developed using a phased approach, with projected initial bitumen production of 100,000 barrels a day. Drilling results indicate that the combined leases hold the potential for up to 300,000 barrels a day, with production estimated to last in excess of 40 years. A regulatory filing is planned for 2005. A decision to fund and construct the project would be made after all approvals are received and project plans are finalized.

Mackenzie gas project

The Mackenzie gas project includes the development of three anchor natural gas fields (Taglu, Parsons Lake and Niglintgak) in the Mackenzie Delta region of the Northwest Territories, a gas-gathering pipeline system, a gas-processing plant and a 1,220-km pipeline system to link northern producing wells to southern markets. The project is proposed by Imperial, ConocoPhillips Canada, Shell Canada, ExxonMobil Canada and the Aboriginal Pipeline Group (APG). The APG was formed in 2000 to represent the ownership interest of the Aboriginal Peoples of the Northwest Territories in the proposed Mackenzie Valley natural gas pipeline.

In October, Imperial, on behalf of the project co-venturers, filed the main regulatory applications and environmental impact statement for the proposed project with the National Energy Board and other boards, panels and agencies responsible for assessing and regulating energy developments in the Northwest Territories. The regulatory review process is currently underway and is expected to take up to 24 months. A decision to proceed with the project will be made by the co-venturers after approvals are received and any conditions attached to the approvals are assessed. Construction would then take three to four years.

The project would bring to market natural gas from three previously discovered onshore anchor fields, including Imperial's wholly owned Taglu field. Taglu covers an area of 32 km² and is estimated to have a recoverable resource of about three trillion cubic feet, with a projected initial production rate of 400 million cubic feet a day. This field represents about one-half of the discovered onshore gas that the Mackenzie gas project would develop.

The project would use conventional, proven technology and construction methods that minimize environmental impact. The proposed pipeline would run along the Mackenzie Valley from Inuvik, N.W.T., and link with an existing pipeline in northern Alberta. A separate natural gas liquids line, with a capacity of 24,000 barrels a day, would run from Inuvik to Norman Wells, N.W.T., where it would join an existing liquids line. Based on discussions with potential shippers, the pipeline was proposed with an initial design capacity of 1.2 billion cubic feet a day and is expandable to 1.9 billion cubic feet a day with additional compression facilities.

The initial cost for the project is estimated to be about \$7 billion, which includes \$3.8 billion for the main pipeline system. The gas-gathering system, including a gas-processing plant at Inuvik, would cost about \$1.6 billion, and the development of the three anchor

(b) Before year-end price/cost revisions.

fields is estimated to cost about \$1.6 billion. Imperial's share of the cost, including development of the Taglu field and the company's share of the gas-gathering and processing system, is estimated to be about \$3 billion.

The company is working to advance the project in four key areas:

- continuing the regulatory process, with applications for required land- and water-use licences to be filed in early 2005
- working on commercial agreements with potential shippers
- completing benefits and access agreements with landowners and Aboriginal groups across whose land the pipeline would run
- continuing engineering work on the technical aspects of the project.

Conventional Western Canada

Production from conventional operations, centred in Western Canada, accounted for 43 percent of the company's total production before royalties. The company maintains a diligent focus on costs, and in 2004 unit operating costs were held flat. These assets, while mature, are highly profitable and deliver excellent returns.

In 2004, gross natural gas production was 569 million cubic feet a day, up 11 percent from 2003. A significant gas development drilling program began in 2004 near Medicine Hat in southeastern Alberta, resulting in additional production to Imperial of nine million cubic feet a day at year-end. The program will continue in 2005.

In addition, the company is selectively producing accumulated natural gas caps from oil reservoirs that have been economically depleted. In 2004, production of natural gas from these "blowdowns" reached 220 million cubic feet a day and is expected to continue through 2006.

East Coast

Imperial's nine-percent interest in the Sable offshore energy project, which produces natural gas offshore of Nova Scotia, contributed volumes of 37 million cubic feet a day before royalties. The project produces from five fields, with the newest field, called South Venture, coming onstream in late 2004 to help maintain production. In 2005, drilling on two additional production wells is planned at the South Venture field, and construction will begin on compression facilities that will increase production from all fields. These facilities are expected to be complete by 2006 and will bring volumes to 44 million cubic feet a day.

The company also holds an interest in exploration leases in the area offshore of Nova Scotia in the vicinity of the Sable project. In 2004, Imperial participated in the drilling of an exploration well on the Scotian Shelf, which was non-commercial. During 2004, Imperial relinquished its interests in nine of 13 licences. Remaining opportunities on the Scotian Shelf appear to be small and high-risk, but industry activity in the region will continue to be monitored.

In early 2004, a 25-percent interest was acquired in the exploration rights for eight deepwater parcels in the Orphan Basin region off the east coast of Newfoundland. This is a large, unexplored frontier basin with favourable attributes for hydrocarbons. A 3-D seismic program was conducted from July to September on three of the eight parcels, and assessment of the data acquired will continue through early 2005. More 3-D seismic is planned on three additional blocks for the summer of 2005.

THEN AND NOW Production

1947

On February 13, 1947, in a farmer's field about 30 km south of Edmonton, an exploratory oil well was brought into production in the presence of more than 500 invited guests. Imperial's historic discovery of oil at Leduc marked the beginning of Canada's role as a major oil producer.

2005

Imperial remains a leader in liquids production, most notably at its wholly owned Cold Lake bitumen-recovery operation, shown here, where more than 200 new wells were completed in 2004. The company is advancing projects on many fronts to develop Canada's vast natural resources and meet energy needs. A delineation drilling program at Kearn, about 70 km north of Fort McMurray, Alberta, will help evaluate this high-quality oil-sands resource. Work is progressing on the Mackenzie gas project, and opportunities on Canada's East Coast are continually assessed.

Imperial processes more than 74 million litres of crude oil a day in its four refineries across Canada, including the Dartmouth refinery, shown here.

Petroleum products

Imperial continued to be the largest producer and marketer of petroleum products in Canada, with the leading market share position in every major market segment it serves. Increased sales of petroleum products during a period of strong industry margins, coupled with sound cost management, were key to delivering record earnings in 2004.

Downstream operations performed very well in 2004, with improved refinery reliability. Refinery utilization in 2004 was at 93 percent, total refinery throughput was up four percent, and total petroleum product sales were 87.6 million litres a day, up three percent from 2003. The company's petroleum products operations achieved record earnings in 2004 of \$500 million after tax, up from a record year in 2003 (\$407 million), reflecting improved refining margins and higher volumes, as well as sound cost management. Return on average capital employed was 20 percent, and cash flow from operating activities and asset sales was \$901 million, of which \$283 million was reinvested in the business. Generally stronger economic conditions in Canada and worldwide created growing demand for petroleum products and higher refining margins.

Esso service stations average number

Throughput – company-owned and leased service stations millions of litres per site

In addition to a strong operating performance and solid reliability, earnings growth and operating improvements in the downstream businesses were achieved with a relentless focus on three areas:

- providing customers with their lowest total cost offer
- having industry-leading unit costs, benchmarked against competitors
- ensuring the efficient and effective use of capital.

In the retail gasoline business, the focus is on providing customers with the products they want quickly and conveniently. The company continued its program of upgrading its network of service stations in major urban markets, which has contributed to increased site productivity. In 2004, five new sites were built, 10 were rebuilt and 14 were upgraded. The company now operates a network of 720 company-owned sites across Canada with an average productivity of 5.6 million litres a year, up almost eight percent from 2003.

The majority of these sites provide an expanded service offer to customers, including a one-stop shopping convenience store, car wash and Tim Hortons outlet. The network of about 400 car-wash facilities remains the largest in the industry. In 2004, total convenience-store sales were up 4.6 percent from 2003, and same-store sales were up 7.8 percent. For convenience, customers can pay at the pump with credit or debit cards, or use the popular Speedpass. Also in 2004, the company expanded the number of sites with pump-mounted television screens from five pilot locations to more than 100 sites. These provide news headlines, weather information, stock reports and in-store specials. Plans are in place to introduce these in more markets in 2005.

The Esso customer loyalty program was enhanced in 2004 with the introduction of Aeroplan. Customers can now choose to collect Aeroplan Miles or Esso Extra points. The Esso loyalty offer is now the most comprehensive program available in Canada, offering a choice of immediate rewards such as car washes and convenience products, or longer-term travel rewards through Aeroplan.

Imperial is committed to having the lowest unit costs in all its key business segments. The retail gasoline business achieved this in 2002 and maintained this position in 2004. The company's primary distribution terminal operations

Petroleum products at a glance

	2004	2003	2002	2001	2000
Net income (millions of dollars)	500	407	127	353	313
Cash flow from operating activities and asset sales (millions of dollars)	901	567	409	834	521
Refinery throughput (millions of litres a day)	74.3	71.6	71.2	71.4	71.6

Petroleum products

reached this goal in 1998 and have sustained that position to date. Refining, lubricants and specialties, and other fuels marketing businesses continued to improve during 2004 and now rank well within the best quartile. Solid plans are in place for each of these units to reach industry-leading cost performance in 2005.

A relentless focus on cost management has reduced unit costs (excluding inflation) over the past 10 years by 22 percent. This has resulted in favourable earnings while unit margins continually declined, decreasing 12 percent over the same period.

As part of ongoing efforts to improve capital productivity, a focus on the efficient and effective use of working capital as well as on capital additions continued. The number of days that product is held in inventory was reduced by a further four percent in 2004. Since 1992, reductions in working capital have released about \$1.5 billion of cash for more productive use.

Efforts to reduce energy use in all operations continued in 2004. The company's Energy Intensity Index (EII), an internationally recognized metric for energy efficiency for petroleum refineries, improved by four percent over 2003. During the past 10 years, Imperial's EII value has improved by 16 percent, as a result of applying best operating practices and targeted capital spending.

Capital investment in the company's petroleum products operations totalled about \$283 million in 2004, about a third of which was directed to projects to further reduce sulphur levels in diesel fuel, thereby reducing smog-forming emissions. In 2005, Imperial plans to invest about \$550 million in its petroleum products operations, which, in addition to completing the low-sulphur diesel project, will be used to improve the company's customer offer and incrementally increase refinery capacity at low capital cost.

Refinery utilization percent

Refinery utilization in 2004 was a record 93 percent, up from 90 percent during the past three years.

THEN AND NOW

Service stations

1916

Customers fill-up a Ford at this 1916 service station. Demand for gasoline, once a minor byproduct of the refining process, increased exponentially with the growing popularity of automobiles. The first motorists bought gasoline in cans or open buckets from grocery or hardware stores. Imperial opened Canada's first service station in 1907 in Vancouver.

2005

Imperial operates a network of 1,978 Esso service stations across Canada. The majority of company-owned sites provide a range of services to customers, including a one-stop shopping convenience store, car wash and Tim Hortons outlet. Imperial has the largest network of car washes in the industry. The Esso Extra loyalty program was enhanced in 2004 to introduce Aeroplan – customers can now choose between collecting Aeroplan Miles or Esso Extra points.

Chemicals

The focus for many years has been on increasing the integration of the Sarnia and Dartmouth chemicals plants within the refineries. This reduces costs and maximizes value for both operations. The strategy has proven effective in making Imperial's chemicals business a leader in cost and productivity. The company also benefits from its integration within ExxonMobil's North American chemicals businesses, which has resulted in a leadership position in the key market segments served.

In 2004, the business cycles for two main products – polyethylene and benzene – were quite favourable, with increased demand for products and strong margins. Chemicals earnings after tax were \$100 million, up 170 percent from 2003. Cash flow from operating activities and asset sales was \$126 million, \$15 million of which was reinvested in the business. Average return on capital employed was almost 47 percent.

Imperial remains one of Canada's leading producers of chemical products, with the largest market share in domestic solvents in Canada, the largest market share in North America for polyethylene used in rotational molding and the second-largest market share in injection molding. The company's Sarnia chemicals plant is located within one day's trucking of 70 percent of the demand for polyethylene in North America. Total sales of petrochemical products were 3,300 tonnes a day, unchanged from 2003.

The polyethylene plant in Sarnia has been expanded five times since it began operations in 1983, with innovative technology applied to all stages of the operation to increase output at a small fraction of the cost of a new facility. Annual capacity is now 450,000 tonnes, up about 230 percent since 1983. In 2004, the business ran with excellent reliability and achieved an all-time production record in August. This plant remains one of the most cost-competitive in the world.

Record production levels of benzene were also achieved in the aromatics business, in a period of record-high industry margins.

Chemicals at a glance

	2004	2003	2002	2001	2000
Net income (millions of dollars)	100	37	52	23	59
Cash flow from operating activities and asset sales (millions of dollars)	126	22	93	9	(6)
Chemicals sales volumes (thousands of tonnes a day)	3.3	3.3	3.5	3.3	3.1
Capital employed at December 31 (millions of dollars)	205	222	150	188	138
Return on average capital employed (percent)	46.8	19.9	30.8	14.1	54.1

Imperial's cash balance at the end of 2004 was almost \$1.3 billion and is managed by treasurer's department employees in the cash operations group.

Principled people and practices

Imperial has a long tradition of sound corporate governance and high ethical standards, which ensure the integrity of its businesses and operations. The company's formula for maintaining this tradition is simple: strong leadership, along with discipline and commitment by employees at all levels of the organization.

For more than 30 years, the company has had a comprehensive business ethics policy, which applies to directors and all employees and guides how all business is conducted.

Governance practices are fully disclosed in the proxy circular and meet the requirements of both the Toronto Stock Exchange and the American Stock Exchange. In addition, governance practices meet the corporate governance guidelines in the proposed National Policy 58-201, published by the Ontario Securities Commission in October 2004.

Sound governance practices are evident throughout the organization. Imperial has a straightforward capital structure and consistently reports results using transparent accounting practices. It does not use special-purpose entities, special adjustments or pro forma reporting. Neither does it use derivatives to speculate or hedge on the future direction of commodity prices, nor sell forward future production.

The company's method of reporting reserves meets all regulatory requirements, including those of the U.S. and Canadian securities commissions and of Canadian National Instrument NI 51-101. Rigorous internal reserves management processes include disciplined and regular technical assessments, which are performed by qualified professionals and are subject to management review and endorsement, consistent with all asset management decisions. Notably, technical and other professionals involved in the process are not compensated based on the levels of proved reserves bookings.

All requirements of the U.S. Sarbanes-Oxley Act have been met since it was introduced in 2002. The fact that the company was able to do so with minimal changes to its controls procedures and processes testifies to the high standard of Imperial's governance systems. Chief among them is the long-standing Controls Integrity Management System

(CIMS), which provides a structured approach for assessing financial control risks and procedures for mitigating concerns, monitoring conformance with standards and reporting results to management. CIMS is consistent with the internal controls framework recommended by the Committee of Sponsoring Organizations of the Treadway Commission, a voluntary private-sector organization dedicated to improving the quality of financial reporting.

The majority of the company's board are nonemployee directors. All board committees are made up solely of these independent directors. All directors and committees have the right to engage an outside adviser at the company's expense, and nonemployee directors meet regularly in the absence of the company's management. Full disclosure of all corporate governance practices is made in the proxy circular.

High-performing, principled employees

The people Imperial employs provide a competitive advantage. High-performing, principled people from diverse backgrounds are hired and developed. At year-end 2004, the company had 6,083 employees, 183 of whom were hired during the year. Every employee is involved in a structured development process, which includes rigorous training in business ethics. The company's association with ExxonMobil gives it a considerable training advantage, providing an opportunity for employees to work with business units around the world to gain valuable global experience.

The company seeks to be the employer of choice for the most capable and highest-performing graduates of Canadian universities and community colleges. In 2004, 69 graduates were hired through the company's campus recruitment program.

Employees

	2004	2003	2002	2001	2000
Number of full-time employees at December 31	6 083	6 256	6 460	6 740	6 704
Total payroll and benefits (millions of dollars) (a)	1 200	1 188	1 034	902	814

(a) Includes both the company's payroll and benefits costs and its share of the Syncrude joint-venture payroll and benefits costs.

Employees performing a leak-detection assessment; monitoring a control panel at Cold Lake; working safely at the Nanticoke refinery.

Training, jobs and environmental protection are discussed at an open house in Yellowknife for residents to learn more about the Mackenzie gas project.

Caring for our communities

Founded on principles of integrity and community responsibility, Imperial has a long-standing record of good corporate citizenship. Throughout the past 125 years, the company has been fulfilling its primary responsibility to supply Canadians and others with reliable, affordable energy, as well as petroleum and petrochemical products. These products provide heat, light and mobility to Canadians and are vital to the manufacture of a multitude of items key to daily life, from computer components and health-care equipment to fertilizers and packaging.

The demand for energy will continue to grow as populations and standards of living increase. Imperial is committed to meeting the growing demand for energy in an environmentally, economically and socially responsible manner.

Nothing is more important than operating our facilities safely and protecting employees, contractors, customers, the public and the environment. The company works to drive environmental incidents with real impact to zero through a process of continuous improvement, and to have a workplace where nobody gets hurt.

The Operations Integrity Management System (OIMS) is the primary tool the company uses to manage its operations and assess and improve its safety, health and environmental performance. Lloyd's Register Quality Assurance, a respected international

Employee and contractor safety leadership

total recordable incidents per 200,000 work hours

Upstream flaring

millions of cubic feet of gas a day

authority, has attested that OIMS meets the ISO 14001 Environmental Management Systems Standard. Lloyd's also stated: "We further believe Imperial Oil to be among the industry leaders in the extent to which environmental management considerations have been integrated into its business processes for ongoing operations and for the planning and development of new projects."

Safety performance continues to be among the best in Canadian industry; Imperial's 2004 performance surpassed that of 2003, which had been the best on record.

In 2004, seven environmental incidents occurred with associated costs of more than \$65,000, up from five in 2003. The most serious of these involved the accidental release of ketone into the St. Clair River from the Sarnia refinery. A preventive measures action plan was submitted to the Ontario Ministry of the Environment and has been implemented. All operating incidents are rigorously investigated, and measures are instituted to prevent similar incidents in the future.

In 2004, \$150 million was invested in projects related to further improving safety and environmental performance. These included \$90 million as part of a \$500-million investment that will enable Imperial's refineries across Canada to produce ultra low-sulphur diesel fuel. This follows a \$650-million refinery investment, completed in 2003, that reduced sulphur levels in gasoline by more than 90 percent a year ahead of regulated requirements. In conjunction with 2007 vehicle engines, these initiatives will reduce smog-causing nitrogen oxides and particulate-matter emissions by almost 90 percent.

Examples of other 2004 environmental initiatives include a project at the Nanticoke, Ont., refinery to improve the quality of water effluent, and another at the Norman Wells operations to install an improved liquid-waste handling facility.

Each year since 1993, Environment Canada has collected information from industries on releases of substances for its National Pollutant Release Inventory (NPRI). Imperial's releases of NPRI substances decreased in 2003 (the most recent year for which

information is available) by more than seven percent over 2002, reflecting the company's focus on continuous improvement in all areas of its operations.

The company tracks and works to reduce the greenhouse-gas intensity of its operations by improving energy efficiency, reducing flaring and investing in cogeneration facilities. In 2003 (the most recent year for which information is available), greenhouse-gas emissions from operations were 0.5 percent lower than in 2002, despite increased volumes of crude oil production and petroleum-product sales.

Engaging communities

Imperial places great value on its relationships with Canadian communities. From working with Pollution Probe to help develop future environmental managers to working with Aboriginal groups to share ideas about protecting the land, these relationships take many forms. But the goal remains the same – to work with communities today to build a better tomorrow.

The company meets regularly with community leaders, governmental and non-governmental organizations and others interested in Imperial's operations, including local residents, businesses and schools. For example, in developing the Mackenzie gas project, the company is working with Aboriginal communities in the Northwest Territories to understand and address the concerns of residents. More than 1,000 meetings with community members have been held to date throughout the Mackenzie Valley. Community input has enabled the project team to better understand the traditional knowledge of the Aboriginal peoples and has also resulted in changes to the proposed pipeline route.

Imperial and the community

Supporting the evolving needs of Canadian communities

In 2004, more than \$10.4 million was contributed to help Canadian communities meet important needs. Focusing on areas across Canada where it has a presence, the company gives the majority of its contributions through the Imperial Oil Foundation.

In 2004, the foundation contributed more than \$6 million to about 415 organizations, with the largest portion being directed toward programs that support youth and education. For example, the company is providing:

- \$500,000 over five years to the University of Manitoba to support the development of the Imperial Oil Academy for the Learning of Math, Science and Technology
- \$250,000 over five years to the St. Joseph Health Centre in Toronto to build a children's health centre
- \$125,000 over five years to Halifax's St. Mary's University to fund Cosmic Rays in the Classroom, a program aimed at piquing elementary school students' interest in science
- \$140,000 over four years to the Nature Conservancy of Canada in Quebec to support the educational component of its St. Lawrence River conservation project.

Imperial contributes significantly to research at Canadian universities. In 2004, through its University Research Awards program, the company awarded 30 grants totalling \$650,000 to 15 universities to fund research into areas of interest to Imperial, including engineering, chemical, physical, computing, social and environmental science. This program has been maintained continuously for more than 50 years.

Also in 2004, the company announced that it would contribute \$10 million over five years to the University of Alberta to fund the Imperial Oil Centre for Oil Sands Innovation. The centre will be dedicated to finding more efficient, economically viable and environmentally responsible ways to develop Canada's vast oil-sands resources.

In addition, Imperial contributed \$200,000 over five years to Petroleum Research Atlantic Canada for research and technology development in this region.

More information on Imperial's corporate citizenship activities can be found in the corporate citizenship section of the company's Web site, www.imperialoil.ca. Imperial's 2003 corporate citizenship report, *A partner in the Canadian community*, is also available on-line.

Management's discussion and analysis of financial condition and results of operations

Overview

The following discussion and analysis of Imperial's financial results, as well as the accompanying financial statements and related notes to consolidated financial statements to which they refer, are the responsibility of the management of Imperial Oil Limited. Beginning in 2004, the company reported its financial results based on generally accepted accounting principles (GAAP) in the United States. The differences between U.S. and Canadian GAAP are small for Imperial and an explanation of them as they apply to the company, including a tabular reconciliation of net income reported under U.S. GAAP and under Canadian GAAP, is included as a note to the financial statements on page 46. Supplemental financial information based on Canadian GAAP pertaining to management's discussion and analysis of Imperial's financial results is also provided, on page 34.

The company's accounting and financial reporting fairly reflect its straightforward business model involving the extracting, refining and marketing of hydrocarbons and hydrocarbon-based products. The company's business involves the production (or purchase), manufacture and sale of physical products, and all commercial activities are directly in support of the underlying physical movement of goods.

This straightforward approach extends to the financing of the business. In evaluating business or investment opportunities, the company views as economically equivalent any debt obligation, whether included on the face of the consolidated balance sheet or disclosed as other debt-like obligations in the notes to the financial statements. The company does not use financial structures for the purpose of removing debt from the balance sheet. Nor does it use derivative markets to speculate on the future direction of currency or commodity prices or sell forward any part of production from any business segment. This consistent, conservative approach to financial management has helped Imperial to sustain its high credit quality.

With its extensive resource base in Canada, financial strength, disciplined investment approach and technology portfolio, Imperial is well positioned to participate in substantial investments to develop new energy supplies. While commodity prices remain volatile on a short-term basis depending upon supply and demand, Imperial's investment decisions are based on long-term outlooks, using a disciplined approach in selecting and pursuing the most attractive investment opportunities. The corporate plan is a fundamental annual management process that is the basis for setting near-term operating and capital objectives in addition to providing the longer-term economic assumptions used for investment evaluation purposes. Annual plan volumes are based on individual field production profiles that are updated annually. Prices for natural gas and other products used for investment evaluation purposes are based on corporate plan assumptions that are developed annually. Potential investment opportunities are tested over a wide range of economic scenarios to establish the resiliency of each opportunity. Once investments are made, a reappraisal process is

completed to ensure relevant lessons are learned and improvements are incorporated into future projects. Imperial views return on capital employed as the best measure of historical capital productivity.

Business environment and outlook

Natural resources

Imperial produces crude oil and natural gas for sale into large North American markets. Economic and population growth are expected to remain the primary drivers of energy demand. The company expects the global economy to grow at an average rate of about three percent per year through 2030. World energy demand should grow by about two percent per year, and oil and gas are expected to account for about 60 percent of world energy supply by 2030. Over the same period, the Canadian economy is expected to grow at an average rate of two percent per year, and Canadian demand for energy at a rate of about one percent per year. Oil and gas are expected to continue to supply two-thirds of Canadian energy demand. It is expected that Canada will also be a growing supplier of energy to U.S. markets through this period.

Oil products are the transportation fuel of choice for the world's fleet of cars, trucks, trains, ships and airplanes. Primarily because of increased demand in developing countries, oil production will increase by 50 percent or nearly 30 million barrels per day over the next three decades. Canada's oil sands represent an important additional source of supply.

Natural gas is expected to be the fastest-growing primary energy source globally, capturing about one-third of all incremental energy growth and approaching one-quarter of global energy supplies. Natural gas production from mature established regions in the United States and Canada is not expected to meet increasing demand, strengthening the market opportunities for new gas supply from Canada's frontier areas.

Crude oil and natural gas prices are determined by global and North American markets and are subject to changing supply and demand conditions. These can be influenced by a wide range of factors including economic conditions, international political developments and weather. In the past, crude oil and natural gas prices have been volatile, and the company expects that volatility to continue.

Imperial has a large and diverse portfolio of oil and gas resources in Canada, both developed and undeveloped, which helps reduce the risks of dependence on potentially limited supply sources in the upstream. With the relative maturity of conventional production in the established producing areas of Western Canada, Imperial's production is expected to come increasingly from frontier and unconventional sources, particularly oil sands and natural gas from the Far North, where Imperial has large undeveloped resource opportunities.

Petroleum products

The downstream continues to experience ongoing volatility in industry margins. Refining margins are the difference between what a refinery pays for its raw materials (primarily crude oil) and the wholesale market prices for the range of products produced (primarily gasoline, diesel fuel, heating oil, jet fuel and fuel oil). Crude oil and many products are widely traded with published international prices. Prices for those commodities are determined by the marketplace, often an international marketplace, and are affected by many factors, including global and regional supply/demand balances, inventory levels, refinery operations, import/export balances, seasonality and weather. Canadian wholesale prices in particular are largely determined by wholesale prices in adjacent U.S. regions. These prices and factors are continually monitored and provide input to operating decisions about which raw materials to buy, facilities to operate and products to make. However, there are no reliable indicators of future market factors that accurately predict changes in margins from period to period.

Imperial's downstream strategies are to provide customers with quality service at the lowest total cost offer, have the lowest unit costs among our competitors, ensure efficient and effective use of capital and capitalize on integration with the company's other businesses. Imperial owns and operates four refineries in Canada, with distillation capacity of 502,000 barrels a day and lubricant manufacturing capacity of 9,000 barrels a day. Imperial's fuels marketing business includes retail operations across Canada serving customers through about 2,000 Esso-branded service stations, of which about 720 are company-owned or leased, and wholesale and industrial operations through a network of 30 distribution terminals.

Chemicals

Although the current business environment is favourable, the North American petrochemical industry is cyclical. The company's strategy for its chemicals business is to reduce costs and maximize value by continuing to increase the integration of its chemicals plants at Sarnia and Dartmouth with the refineries. The company also benefits from its integration within ExxonMobil's North American chemicals businesses, enabling Imperial to maintain a leadership position in its key market segments.

Results of operations

Net income in 2004 was \$2,052 million or \$5.74 a share – the best year on record – compared with \$1,705 million or \$4.58 a share in 2003 (2002 – \$1,214 million or \$3.20 a share). Higher realizations for crude oil, stronger industry refining and petrochemical margins, and higher volumes of Syncrude production, natural gas and petroleum products contributed positively to net income, partly offset by lower marketing margins. Compared with 2003, these favourable operating results were partly offset by the combined negative effects of a higher Canadian dollar on resource and product prices of about \$260 million, the absence of favourable foreign-exchange effects on the company's U.S.-dollar-denominated debt of about \$110 million, and lower benefits from tax matters of about \$100 million.

Total revenues were \$22.5 billion, up about 17 percent from 2003.

The return on average capital employed was 28 percent, compared with 25 percent in 2003 (2002 – 20 percent).

Natural resources

Net income from natural resources was a record \$1,487 million, up from \$1,143 million in 2003 (2002 – \$1,042 million). The positive earnings effects of improved realizations for crude oil and natural gas, combined with higher Syncrude, natural gas and natural gas liquids (NGLs) volumes, were partly offset by lower Cold Lake bitumen production, lower benefits from tax matters and the negative effects of a higher Canadian dollar.

Resource revenues were \$6.6 billion, up from \$5.6 billion in 2003 (2002 – \$4.9 billion). The main reasons for the increase were higher prices for crude oil and increased natural gas and Syncrude volumes.

Return on average capital employed was 39 percent for the natural resources segment, compared with 33 percent in 2003 (2002 – 36 percent), reflecting higher net income.

Financial statistics

millions of dollars	2004	2003	2002	2001	2000

Cash flow from operating activities and asset sales	2 364	1 668	1 258	1 226	1 911
Capital employed at December 31	3 839	3 725	3 252	2 573	2 162
Return on average capital employed (percent)	39.3	32.8	35.8	39.7	49.9

Factors affecting Imperial's 2004 net income

millions of dollars

U.S.-dollar world oil prices were considerably higher in 2004 than in the previous year. The annual average price of Brent crude oil, the most actively traded North Sea crude and a common benchmark of world oil markets, was \$38 (U.S.) a barrel in 2004, a more than 30-percent increase over the average price of \$29 in 2003 (2002 – \$25).

However, increases in the company's Canadian-dollar realizations for conventional crude oil and Cold Lake bitumen were dampened by the effects of a higher Canadian dollar. Average realizations for conventional crude oil during the year were \$48.96 (Cdn) a barrel, an increase of 22 percent from \$40.10 in 2003 (2002 – \$36.81).

Average prices for Canadian heavy crude oil were higher in 2004, but by less than the relative increase in light crude oil prices, as increased supply of heavy crude oil widened the average spread between light and heavy crude. The price of Bow River, a benchmark Canadian heavy crude oil, increased by 15 percent in 2004, much less than the increase in prices for Canadian light crude oil. Cold Lake bitumen realizations in U.S. dollars averaged 19 percent higher in 2004 than in 2003. Average realizations for Cold Lake bitumen were only about 10 percent higher than the previous year, reflecting the effect of the higher Canadian dollar.

Prices for Canadian natural gas in 2004 were essentially unchanged from the previous year. The average of 30-day spot prices for natural gas at the AECO hub in Alberta was about \$6.80 a thousand cubic feet in 2004, compared with \$6.70 in 2003 (2002 – \$4.10).

The company's average realizations on natural gas sales were \$6.78 a thousand cubic feet, compared with \$6.60 in 2003 (2002 – \$4.02).

Average realizations and prices

Canadian dollars	2004	2003	2002	2001	2000
Conventional crude oil realizations (a barrel)	48.96	40.10	36.81	35.56	41.52
Natural gas liquids realizations (a barrel)	33.78	32.09	23.38	29.31	29.57
Natural gas realizations (a thousand cubic feet)	6.78	6.60	4.02	5.72	4.99
Par crude oil price at Edmonton (a barrel)	53.26	43.93	40.44	39.64	45.02
Heavy crude oil price at Hardisty (Bow River, a barrel)	37.98	33.00	31.85	25.11	34.49

Gross production of crude oil and NGLs increased to 262,000 barrels a day from 256,000 barrels in 2003 (2002 – 247,000).

Gross bitumen production at the company's wholly owned facilities at Cold Lake decreased to 126,000 barrels a day from 129,000 barrels in 2003 (2002 – 112,000), due to the cyclic nature of production at Cold Lake.

Production from the Syncrude operation, in which the company has a 25-percent interest, increased during 2004 as a result of reduced turnaround activities. Gross production of upgraded crude oil increased to a record 238,000 barrels a day from 211,000 barrels in 2003 (2002 – 229,000). Imperial's share of average gross production increased to 60,000 barrels a day from 53,000 barrels in 2003 (2002 – 57,000).

Gross production of conventional oil decreased to 43,000 barrels a day from 46,000 barrels in 2003 (2002 – 51,000) as a result of the natural decline in Western Canadian reservoirs.

Gross production of NGLs available for sale averaged 33,000 barrels a day in 2004, up from 28,000 barrels in 2003 (2002 – 27,000).

Gross production of natural gas increased to 569 million cubic feet a day from 513 million in 2003 (2002 – 530 million). Higher natural gas and NGL volumes were mainly a result of the full-year production of natural gas from the Wizard Lake gas cap in Alberta, which began in the third quarter of 2003.

Production (c)	569	518	513	457	530	463	572	466	526	459
Sales	520		460		499		502		419	

(a) Daily volumes are calculated by dividing total volumes for the year by the number of days in the year. Gross production is the company's share of production (excluding purchases) before deducting the shares of mineral owners or governments or both. Net production excludes those shares.

(b) Includes natural gas condensate added to the Cold Lake bitumen to facilitate transportation to market by pipeline.

(c) Production of natural gas includes amounts used for internal consumption with the exception of amounts reinjected.

Operating costs increased by seven percent in 2004. The main factor was higher depreciation and depletion expenses in line with higher production volumes.

Petroleum products

Net income from petroleum products was a record \$500 million or 1.6 cents a litre in 2004, up from \$407 million or 1.3 cents a litre in 2003 (2002 – \$127 million or 0.4 cents a litre). Improved earnings were mainly due to stronger international refining margins, partly offset by lower fuels marketing margins and the negative impact of a higher Canadian dollar. Sales volumes of petroleum products were higher, due in part to higher industry demand.

Revenues were \$19.2 billion, up from \$16.1 billion in 2003 (2002 – \$14.4 billion).

Return on average capital employed was 20 percent for the petroleum products segment, compared with 17 percent in 2003 (2002 – six percent).

Financial statistics

millions of dollars	2004	2003	2002	2001	2000
Net income	500	407	127	353	313
Revenues	19 211	16 058	14 434	14 405	15 120
Cash flow from operating activities and asset sales	901	567	409	834	521
Capital employed at December 31	2 410	2 601	2 266	2 095	2 263
Return on average capital employed (percent)	20.0	16.7	5.8	16.2	14.0

Sales of petroleum products

millions of litres a day (a)	2004	2003	2002	2001	2000
Gasolines	33.2	33.0	32.9	32.3	32.0
Heating, diesel and jet fuels	27.3	26.2	25.0	26.5	27.5
Heavy fuel oils	5.9	5.4	4.9	5.4	5.1
Lube oils and other products	7.0	5.8	6.4	5.4	5.0
Net petroleum products sales	73.4	70.4	69.2	69.6	69.6
Sales under purchase and sale agreements	14.2	14.6	13.9	11.6	10.7
Total sales of petroleum products	87.6	85.0	83.1	81.2	80.3
Total domestic sales of petroleum products (percent)	93.0	93.3	91.5	93.4	94.0

Refinery utilization

millions of litres a day (a)	2004	2003	2002	2001	2000
Total refinery throughput (b)	74.3	71.6	71.2	71.4	71.6
Refinery capacity at December 31	79.9	79.9	79.4	79.1	78.7
Utilization of total refinery capacity (percent)	93	90	90	90	91

(a) Volumes a day are calculated by dividing total volumes for the year by the number of days in the year.

(b) Crude oil and feedstocks sent directly to atmospheric distillation units.

One thousand litres is approximately 6.3 barrels.

Margins were stronger in the refining segment of the industry in 2004 compared with those in 2003, as international wholesale product prices increased more than raw material costs. However, the effects of higher international margins were reduced partially by a higher Canadian dollar. Retail margins in the fuels marketing area were lower in 2004, reflecting the impact of highly competitive markets.

Operating performance of the company's four refineries was solid. Throughput at the refineries has increased, with refinery capacity utilization averaging a record 93 percent in 2004, compared with 90 percent in 2003 (2002 – 90 percent).

The company's total sales volumes, including those resulting from reciprocal supply agreements with other companies, were 87.6 million litres a day, compared with 85 million litres in 2003 (2002 – 83.1 million). Excluding sales resulting from reciprocal agreements, sales were 73.4 million litres a day, compared with 70.4 million litres in 2003 (2002 – 69.2 million).

Operating costs increased by about two percent in 2004 from the previous year, mainly because of higher energy, environmental and depreciation costs.

Chemicals

Net income from chemicals operations was \$100 million in 2004, compared with \$37 million in 2003 (2002 – \$52 million). Strong industry polyethylene and benzene margins were the main factors contributing to the improvement.

Financial statistics

millions of dollars	2004	2003	2002	2001	2000
Net income	100	37	52	23	59
Revenues	1 509	1 232	1 164	1 175	1 173
Cash flow from operating activities and asset sales	126	22	93	9	(6)
Capital employed at December 31	205	222	150	188	138
Return on average capital employed (percent)	46.8	19.9	30.8	14.1	54.1

Sales volumes

thousands of tonnes a day (a)	2004	2003	2002	2001	2000
Polymers and basic chemicals	2.7	2.4	2.5	2.4	2.2
Intermediates and other	0.6	0.9	1.0	0.9	0.9
Total chemicals	3.3	3.3	3.5	3.3	3.1

(a) Volumes a day are calculated by dividing total volumes for the year by the number of days in the year.

One tonne is approximately 1.1 short tons or 0.98 long tons.

Total revenues from chemical operations were \$1,509 million, compared with \$1,232 million in 2003 (2002 – \$1,164 million). Higher prices for polyethylene, intermediate chemicals and aromatics were the contributing factors.

Return on average capital employed was 47 percent for the chemicals segment, compared with 20 percent in 2003 (2002 – 31 percent).

The average industry price of polyethylene was \$1,584 a tonne in 2004, up 12 percent from \$1,415 a tonne in 2003 (2002 – \$1,229). Margins were higher as demand for polyethylene products grew.

Sales of chemicals were 3,300 tonnes a day, unchanged from 2003 (2002 – 3,500 tonnes), while polyethylene and benzene sales were up three percent and 32 percent respectively over 2003.

Operating costs in the chemicals segment for 2004 were about the same as 2003. Higher energy costs were offset by lower depreciation expense. A significant portion of the property, plant and equipment currently used in production and manufacturing has been fully depreciated.

Average refining margins Canadian cents a litre

New York Harbor product prices minus
Brent crude; reflects Imperial's
product mix.

Management's discussion and analysis of financial condition and results of operations (continued)

Corporate and other

Net income from corporate and other accounts was negative \$35 million in 2004, compared with positive \$118 million in 2003 (2002 – negative \$7 million). Lower net income in 2004 was mainly due to the absence of the favourable foreign-exchange effects on the company's U.S.-dollar-denominated debt, which was replaced with Canadian-dollar-denominated debt in June and July of 2003. Net income for 2004 also included a non-recurring after-tax writedown of \$42 million on a north Toronto property, which was acquired in 1991 to be the company's future Toronto headquarters site. The remeasurement at fair value of this property reflected a change in its intended use and management's commitment to sell following the announcement of the relocation of the company's headquarters to Calgary.

Liquidity and capital resources

Sources and uses of cash

millions of dollars	2004	2003
Cash provided by/(used in)		
Operating activities	3 312	2 227
Investing activities	(1 306)	(1 426)
Financing activities	(1 175)	(1 119)
Increase/(decrease) in cash and cash equivalents	831	(318)
Cash and cash equivalents at end of year	1 279	448

Although the company issues long-term debt from time to time, internally generated funds cover the majority of its financial requirements. The management of cash that may be temporarily available as surplus to the company's immediate needs is carefully controlled, both to ensure that it is secure and readily available to meet the company's cash requirements as they arise and to optimize returns on cash balances.

Cash flows from operating activities are highly dependent on crude oil and natural gas prices and product margins. In addition, the company will need to continually find and develop new resources, and continue to develop and apply new technologies and recovery processes to existing fields, in order to maintain or increase production and resulting cash flows in future periods. Projects are in place or underway to increase production capacity. However, these volume increases are subject to a variety of risks including project execution, operational outages, reservoir performance and regulatory changes.

The company's financial strength enables it to make large, long-term capital expenditures. Imperial's large and diverse portfolio of development opportunities and the complementary nature of its business segments help mitigate the overall risks of the company and associated cash flow. Further, due to its financial strength, debt capacity and diverse portfolio of opportunities, the risk associated with failure or delay of any single project would not have a significant impact on the company's liquidity or ability to generate sufficient cash flows for operations and its fixed commitments.

Cash flow from operating activities

Cash provided by operating activities was \$3,312 million, up from \$2,227 million in 2003 (2002 – \$1,688 million). The increased cash inflow was mainly due to higher net income, timing of scheduled income-tax payments and the additional funding contributions to the employee pension plan in 2003.

Capital and exploration expenditures

Total capital and exploration expenditures were \$1,445 million in 2004, down slightly from \$1,559 million in 2003 (2002 – \$1,612 million).

The funds were used mainly to invest in growth opportunities in the oil sands and the Mackenzie gas project, to upgrade refineries to meet low-sulphur diesel requirements and to enhance the company's retail network. About \$150 million was spent on projects related to reducing the environmental impact of its operations and improving safety, including about \$90 million on the \$500-million capital project to produce low-sulphur diesel.

The following table shows the company's capital and exploration expenditures for natural resources during the five years ending December 31, 2004:

millions of dollars	2004	2003	2002	2001	2000
Exploration	60	57	39	49	56
Production	234	181	143	109	110
Heavy oil	819	769	804	588	268
Total capital and exploration expenditures	1 113	1 007	986	746	434

For the natural resources segment, about 90 percent of the capital and exploration expenditures in 2004 was focused on growth opportunities. The single largest investment during the year was the company's share of the Syncrude expansion. Construction on the upgrader expansion made good progress since the first quarter of 2004, when cost estimates were substantially increased and the construction schedule was extended. At year-end, the project was tracking to the revised cost and construction schedule. The remainder of 2004 investment was directed to advancing the Mackenzie gas project and drilling at Cold Lake and in conventional fields in Eastern and Western Canada.

For the Mackenzie gas project, in October 2004, the main regulatory applications and environmental impact statement were filed with the National Energy Board and other boards, panels and agencies responsible for assessing and regulating energy developments in the Northwest Territories. The regulatory review process is expected to take up to 24 months. A decision to proceed with the project will be made by the co-venturers of the project after approvals are received and any conditions attached to the approvals are assessed.

Planned capital and exploration expenditures in natural resources are expected to be about \$1 billion in 2005, with nearly 90 percent of the total focused on growth opportunities. Much of the expenditure will be directed to the expansion now underway at Syncrude. Investments are also planned for the ongoing development drilling at Cold Lake, the Mackenzie gas project and further development drilling in Western Canada. Planned expenditures for exploration and development drilling, as well as capacity additions in conventional oil and gas operations, are expected to be about \$355 million.

The following table shows the company's capital expenditures in the petroleum products segment during the five years ending December 31, 2004:

millions of dollars	2004	2003	2002	2001	2000
Marketing	85	91	133	171	121
Refining and supply	178	369	399	118	100
Other (a)	20	18	57	50	11
Total capital expenditures	283	478	589	339	232

(a) Consists primarily of real estate purchases.

For the petroleum products segment, capital expenditures decreased to \$283 million in 2004, compared with \$478 million in 2003 (2002 – \$589 million), primarily because of the completion of the project to significantly reduce sulphur content in gasoline, which began in 2001. New investments in 2004 included about \$90 million spent on the initial phases of a three-year project to reduce sulphur content in diesel. In addition, \$24 million was spent on other refinery projects to improve energy efficiency and increase yield. Major investments were also made to upgrade the network of Esso service stations during the year.

Capital expenditures for the petroleum products segment in 2005 are expected to be about \$550 million. Major items include additional investment in refining facilities to reduce the sulphur content in diesel to meet regulatory requirements and continued enhancements to the company's retail network.

The following table shows the company's capital expenditures for its chemicals operations during the five years ending December 31, 2004:

millions of dollars	2004	2003	2002	2001	2000
Capital expenditures	15	41	25	30	13

Of the capital expenditures for chemicals in 2004, the major investment focused on improving energy efficiency, yields and process control technology.

Planned capital expenditures for chemicals in 2005 will be about \$20 million.

Total capital and exploration expenditures for the company in 2005, which will focus mainly on growth and productivity improvements, are expected to total about \$1.6 billion and will be financed from internally generated funds.

Cash flow from financing activities

In June, the company renewed the normal course issuer bid (share-repurchase program) for another 12 months. During 2004, the company purchased about 14 million shares for \$872 million (2003 – 16 million shares for \$799 million). Since Imperial initiated its first share-repurchase program in 1995, the company has purchased 233 million shares – representing about 40 percent of the total outstanding at the start of the program – with resulting distributions to shareholders of \$6.8 billion.

Management's discussion and analysis of financial condition and results of operations (continued)

The company declared dividends totalling 88 cents a share in 2004, up from 87 cents in 2003 (2002 – 84 cents). Regular per-share dividends paid have increased in each of the past 10 years and, since 1986, payments per share have grown by more than 65 percent.

Total debt outstanding at the end of 2004, excluding the company's share of equity company debt, was \$1,443 million, compared with \$1,432 million at the end of 2003 (2002 – \$1,538 million). Debt represented 19 percent of the company's capital structure at the end of 2004, compared with 21 percent at the end of 2003 (2002 – 24 percent).

Debt-related interest incurred in 2004, before capitalization of interest, was \$37 million, down from \$38 million in 2003 (2002 – \$40 million). The average effective interest rate on the company's debt was 2.8 percent in 2004, compared with 2.9 percent in 2003 (2002 – 2.1 percent).

On May 6, 2004, the company filed a final short-form shelf prospectus in Canada in connection with the issuance of medium-term notes over the 25-month period that the shelf prospectus remains valid. The unsecured notes will be issued from time to time at the discretion of the company in an aggregate amount not to exceed \$1 billion. The company has not issued any notes under this shelf prospectus.

Financial percentages, ratios and credit rating

	2004	2003	2002	2001	2000
Total debt as a percentage of capital (a)	19	21	24	26	25
Interest coverage ratios					
Earnings basis (b)	83	64	46	26	23
Cash-flow basis (c)	108	80	63	36	29
Long-term unsecured debt rating					
Local currency (DBRS / S&P) (d)	AA/AAA	AA/AAA	AA/AAA	AA/AAA	AA/AAA

(a) Current and long-term portions of debt (page 39), divided by debt and shareholders' equity (page 39).

(b) Net income (page 37), debt-related interest before capitalization (page 56, note 15) and income taxes (page 37) divided by debt-related interest before capitalization.

(c) Cash flow from net income adjusted for the cumulative effect of accounting change and other non-cash items (page 38), current income tax expense (page 47, note 4) and debt-related interest before capitalization (page 56, note 15) divided by debt-related interest before capitalization.

(d) Dominion Bond Rating Service (DBRS) and Standard & Poor's Corporation (S&P) are debt-rating agencies.

The company's financial strength, as evidenced by the above financial ratios, represents a competitive advantage of strategic importance. The company's sound financial position gives it the opportunity to access the world's capital markets in the full range of market conditions and enables the company to take on large, long-term capital commitments in the pursuit of maximizing shareholder value.

Contractual obligations

To more fully explain Imperial's financial position, the following table shows the company's contractual obligations outstanding at December 31, 2004. It brings together, for easier reference, data from the consolidated balance sheet and from individual notes to the consolidated financial statements.

millions of dollars	Financial statement note reference	Payment due by period			Total amount
		2005	2006 to 2009	2010 and beyond	
Long-term debt and capital leases	Note 3	995	334	33	1 362
Imperial's share of equity company debt		56	–	–	56
Operating leases	Note 12	62	181	91	334
Unconditional purchase obligations (a)	Note 12	102	168	55	325
Firm capital commitments (b)	Note 12	119	52	–	171
Pension obligations (c)	Note 7	371	91	297	759
Asset retirement obligations (d)	Note 8	36	116	176	328
Other long-term agreements (e)	Note 12	241	378	198	817

(a) Unconditional purchase obligations mainly pertain to pipeline throughput agreements.

(b) Firm capital commitments related to capital projects, shown on an undiscounted basis, totalled approximately \$171 million at the end of 2004, compared with \$189 million at year-end 2003. The largest commitment outstanding at year-end 2004 was associated with the company's share of upstream capital projects of \$112 million at Syncrude and offshore Canada's East Coast.

(c) The amount by which accumulated benefit obligations (ABO) exceeded the fair value of fund assets at year-end (page 48, note 7). For funded pension plans, this difference was \$446 million at December 31, 2004. For unfunded plans, this was the ABO amount of \$313 million. The payments by period include expected contributions to funded pension plans in 2005 and estimated benefit payments for unfunded plans in all years.

(d) Asset retirement obligations represent the discounted present value of legal obligations associated with site restoration on the retirement of assets with determinable useful lives.

(e) Other long-term agreements include primarily raw material supply and transportation services agreements.

The company was contingently liable at December 31, 2004, for a maximum of \$175 million relating to guarantees for purchasing operating equipment and other assets from its rural marketing associates upon expiry of the associate agreement or the death or resignation of the associate. The company expects that the fair value of the operating equipment and other assets so purchased would cover the maximum potential amount of future payments under the guarantees.

Various lawsuits are pending against Imperial Oil Limited and its subsidiaries. Based on a consideration of all relevant facts and circumstances, the company does not believe the ultimate outcome of any currently pending lawsuits against the company will have a material, adverse effect upon the company's operations or financial condition. There are no events or uncertainties known to management beyond those already included in reported financial information that would indicate a material change in future operating results or financial condition.

Recently issued Statement of Financial Accounting Standards

In December 2004, the Financial Accounting Standards Board (FASB) issued a revised Statement of Financial Accounting Standards No. 123 (SFAS 123R), Share-based Payments. SFAS 123R requires compensation costs related to share-based payment arrangements to employees to be recognized in the income statement over the period that an employee provides service in exchange for the award. The amount of the compensation cost will be measured based on the grant-date fair value of the instruments issued. In addition, liability awards will be remeasured each reporting period through settlement. SFAS 123R is effective as of July 1, 2005, for all awards granted or modified after that date and for those awards granted prior to that date for which the requisite employee service has not yet been rendered. SFAS 123R will have no impact on the company because in 2003 the company adopted a policy of expensing all share-based payments that is consistent with the provisions of SFAS 123R and the requisite employee service for all prior year outstanding stock options has been rendered.

Emerging accounting and reporting issues

Accounting for purchases and sales of inventory with the same counterparty

At its November 2004 meeting, the Emerging Issues Task Force (EITF) of FASB began discussion of Issue 04-13, "Accounting for Purchases and Sales of Inventory with the Same Counterparty." This Issue addresses the question of when it is appropriate to measure purchases and sales of inventory at fair value and record them in cost of sales and revenues and when they should be recorded as an exchange measured at the book value of the item sold. The EITF did not reach a consensus on this issue, but requested the FASB staff to further explore the alternative views.

The company records certain purchases and sales entered into contemporaneously with the same counterparty as cost of sales and revenues, measured at fair value as agreed upon by a willing buyer and a willing seller. These transactions occur under contractual arrangements that establish the agreement terms either jointly, in a single contract, or separately, in individual contracts. Should the EITF reach a consensus on this issue requiring these transactions to be recorded as exchanges measured at book value, the reported amounts in "operating revenues" and "purchases of crude oil and products" on the consolidated statement of income would be lower by equal amounts with no impact on net income. The company has not yet determined the amount by which "operating revenues" and "purchases of crude oil and products" would be lower under this interpretation. A special effort is needed to identify purchase/sale transactions from other monetary purchases and monetary sales. A best effort estimate based on this undertaking is expected to be available in the second quarter of 2005. The company will disclose this information, if material, once it is available.

Critical accounting policies

The company's financial statements have been prepared in accordance with United States generally accepted accounting principles (GAAP) and include estimates that reflect management's best judgments. The company's accounting and financial reporting fairly reflect its straightforward business model. Imperial does not use financing structures for the purpose of altering accounting outcomes or removing debt from the balance sheet. The following summary provides further information about the critical accounting policies and the estimates that are made by the company to apply those policies. It should be read in conjunction with pages 41 to 43.

Management's discussion and analysis of financial condition and results of operations (continued)

Hydrocarbon reserves

Proved oil, gas and synthetic crude oil reserve quantities are used as the basis of calculating unit-of-production rates for depreciation and evaluating for impairment. Proved oil and gas reserves are the estimated quantities of crude oil, natural gas and natural gas liquids that geological and engineering data demonstrate with reasonable certainty to be recoverable in future years from known reservoirs and deposits under existing economic and operating conditions. Estimates of synthetic crude oil reserves are based on detailed geological and engineering assessments of in-place crude bitumen volume, the mining plan, historical extraction recovery and upgrading yield factors, installed plant operating capacity and operating approval limits.

The estimation of proved reserves is controlled by the company through long-standing approval guidelines. Reserve changes are made with a well-established, disciplined process driven by senior-level geoscience and engineering professionals (assisted by a central reserves group with significant independent technical experience), culminating in reviews with and approval by senior management and the company's board of directors. Key features of the estimation include rigorous peer-reviewed technical evaluations and analysis of well and field performance information, and a requirement that management make a commitment toward the development of the reserves prior to booking. Notably, technical and other professionals involved in the process are not compensated based on the levels of proved reserves bookings.

Although the company is reasonably certain that proved reserves will be produced, the timing and ultimate recovery can be affected by a number of factors, including completion of development projects, reservoir performance and significant changes in long-term oil and gas price levels.

In compliance with the United States Securities and Exchange Commission regulatory guidance, the company has reported 2004 reserves on the basis of the day of December 31, 2004, prices and costs ("year-end prices"). Resultant changes in Cold Lake bitumen and the associated natural gas reserves from the year-end 2003 estimates, which were based on long-term projections of oil and gas prices consistent with those used in the company's investment decision-making process, are shown in the line titled "Year-end price/cost revisions" on page 59. The requirement to use year-end prices for reserves estimation introduces single-day price focus and volatility in the valuation of reserves to be produced over the next 20 to 30 years. The company believes that this approach is inconsistent with the long-term nature of the natural resources business. The use of prices from a single date is not relevant to the investment decisions made by the company, and annual variations in reserves based on such year-end prices are not of consequence in how the business is managed.

The impact of year-end prices on reserves estimation is most clearly shown at Cold Lake, where proved bitumen and associated natural gas reserves were reduced by about 485 million oil-equivalent barrels as a result of using December 31, 2004, prices, which were unusually low. Prices of Cold Lake bitumen were strong for most of 2004, however, they began to deteriorate in the middle of the fourth quarter and ended on December 31, 2004, 70 percent below the year's average. Prices quickly rebounded from December 31, and through January 2005 returned to levels that have restored the reserves to the proved category.

Performance-related revisions can include upward or downward changes in previously estimated volumes of proved reserves for existing fields due to the evaluation or revaluation of (1) already available geologic, reservoir or production data, or (2) new geologic or reservoir data. Performance-related revisions can also include changes associated with the performance of improved recovery projects and significant changes in either development strategy or production equipment/facility capacity.

The company uses the successful-efforts method to account for its exploration and production activities. Under this method, costs are accumulated on a field-by-field basis with certain exploratory expenditures and exploratory dry holes being expensed as incurred. The company continues to carry as an asset the cost of drilling exploratory wells that find sufficient quantities of reserves to justify their completion as producing wells if the required capital expenditure is made and drilling of additional exploratory wells is underway or firmly planned for the near future. Once exploration activities demonstrate that sufficient quantities of commercially producible reserves have been discovered, continued capitalization is dependent on project reviews, which take place at least annually, to ensure that satisfactory progress toward ultimate development of the reserves is being achieved. Exploratory well costs not meeting these criteria are charged to expense. Capitalized exploratory drilling costs pending the determination of proved reserves or the amount of suspended exploratory well costs were negligible, \$2 million and \$13 million at December 31, 2004, 2003 and 2002 respectively. Costs of productive wells and development dry holes are capitalized and amortized on the unit-of-production method for each field. The company uses this accounting policy instead of the full-cost method because it provides a more timely accounting of the success or failure of the company's exploration and production activities.

Impact of reserves on depreciation

The calculation of unit-of-production depreciation is a critical accounting estimate that measures the depreciation of natural resources assets. It is the ratio of (1) actual volumes produced to (2) total proved developed reserves (those reserves recoverable through existing wells with existing equipment and operating methods) applied to (3) the asset cost. The volumes produced and asset cost are known and, while proved developed reserves have a high probability of recoverability, they are based on estimates

that are subject to some variability. This variability has generally resulted in net upward revisions of proved reserves in existing fields, as more information becomes available through research and production. Revisions have averaged 16 million oil-equivalent barrels per year over the last five years and have resulted from effective reservoir management and the application of new technology. While the upward revisions the company has made over the last five years are an indicator of variability, they have had little impact on the unit-of-production rates of depreciation because they have been small compared to the large proved reserves base.

Impact of reserves and prices on testing for impairment

Proved oil and gas properties held and used by the company are reviewed for impairment whenever events or circumstances indicate that the carrying amounts may not be recoverable. Assets are grouped at the lowest level for which there are identifiable cash flows that are largely independent of the cash flows of other groups of assets.

The company estimates the future undiscounted cash flows of the affected properties to judge the recoverability of carrying amounts. In general, impairment analyses are based on proved reserves. Where probable reserves exist, an appropriately risk-adjusted amount of these reserves may be included in the impairment evaluation. An asset would be impaired if the undiscounted cash flows were less than its carrying value. Impairments are measured by the amount by which the asset's carrying value exceeds its fair value.

The impairment evaluation triggers include a significant decrease in current and projected prices or reserve volumes, an accumulation of project costs significantly in excess of the amount originally expected, and historical and current negative operating losses.

In general, the company does not view temporarily low oil prices as a triggering event for conducting impairment tests. The markets for crude oil and natural gas have a history of significant price volatility. Although prices will occasionally drop precipitously, the relative growth/decline in supply versus demand will determine industry prices over the long term and these cannot be accurately predicted. Accordingly, any impairment tests that the company performs make use of the company's long-term price assumptions for crude oil and natural gas markets, petroleum products and chemicals. These are the same price assumptions that are used in the company's annual planning and budgeting processes and are also used for capital investment decisions.

The standardized measure of discounted future cash flows on page 58 is based on the year-end 2004 price applied for all future years, as required under Statement of Financial Accounting Standards No. 69 (SFAS 69). Future prices used for any impairment tests will vary from the one used in the SFAS 69 disclosure and could be lower or higher for any given year.

Retirement benefits

The company's pension plan is managed in compliance with the requirements of governmental authorities and meets funding levels as determined by independent third-party actuaries. Pension accounting requires explicit assumptions regarding, among others, the discount rate for the benefit obligations, the expected rate of return on plan assets and the long-term rate of future compensation increases. All pension assumptions are reviewed annually by senior management. These assumptions are adjusted only as appropriate to reflect long-term changes in market rates and outlook. The long-term expected rate of return on plan assets of 8.25 percent used in 2004 compares to actual returns of 10.7 percent and 10.1 percent achieved over the last 10- and 20-year periods ending December 31, 2004. If different assumptions are used, the expense and obligations could increase or decrease as a result. The company's potential exposure to changes in assumptions is summarized in note 7 to the consolidated financial statements on page 51. At Imperial, differences between actual returns on plan assets versus long-term expected returns are not recorded in the year the differences occur, but rather are amortized in pension expense as permitted by GAAP, along with other actuarial gains and losses over the expected remaining service life of employees. The company uses the fair value of the plan assets at year-end to determine the amount of the actual gain or loss that will be amortized and does not use a moving average value of plan assets. Pension expense represented about one percent of total expenses in 2004.

Asset retirement obligations and other environmental liabilities

Legal obligations associated with site restoration on the retirement of assets with determinable useful lives are recognized when they are incurred, which is typically at the time the assets are installed. The obligations are initially measured at fair value and discounted to present value. Over time, the discounted asset retirement obligation amount will be accreted for the change in its present value, with this effect included in operating expense. As payments to settle the obligations occur on an ongoing basis and will continue over the lives of the operating assets, which can exceed 25 years, the discount rate will be adjusted only as appropriate to reflect long-term changes in market rates and outlook. For 2004, the obligations were discounted at six percent and the accretion expense was \$22 million, which was significantly less than one percent of total expenses in the year. There would be no material impact on the company's reported financial results if a different discount rate had been used.

Asset retirement obligations are not recognized for assets with an indeterminate useful life. For these and non-operating assets, the company accrues provisions for environmental liabilities when it is probable that obligations have been incurred and the amount can be reasonably estimated.

Management's discussion and analysis of financial condition and results of operations (continued)

Asset retirement obligations and other environmental liabilities are based on engineering estimated costs, taking into account the anticipated method and extent of remediation consistent with legal requirements, current technology and the possible use of the location. Since these estimates are specific to the locations involved, there are many individual assumptions underlying the company's total asset retirement obligations and provision for other environmental liabilities. While these individual assumptions can be subject to change, none of them is individually significant to the company's reported financial results.

Market risks and other uncertainties

The company is exposed to a variety of financial, operating and market risks in the course of its business. Some of these risks are within the company's control, while others are not. For those risks that can be controlled, specific risk-management strategies are employed to reduce the likelihood of loss. Other risks, such as changes in international commodity prices and currency-exchange rates, are beyond the company's control.

Although the government of Canada in ratifying the Kyoto Protocol agreed to restrictions of greenhouse-gas emissions by the period 2008-2012, it has not determined what measures it will impose on companies. Consequently, attempts to assess impact on Imperial can only be speculative. The company will continue to monitor the development of legal requirements in this area.

The company's size, strong financial position and the complementary nature of its natural resources, petroleum products and chemicals segments help mitigate the company's exposure to changes in these other risks. The company's potential exposure to these types of risk is summarized in the table below.

The company does not use derivative markets to speculate on the future direction of currency or commodity prices and does not sell forward any part of production from any business segment.

The following table shows the estimated annual effect, under current conditions, of certain sensitivities of the company's after-tax net income.

Earnings sensitivities (a)

millions of dollars after tax

Four dollars (U.S.) a barrel change in crude oil prices	+ (-)	\$ 200
Sixty cents a thousand cubic feet change in natural gas prices	+ (-)	\$ 20
One cent a litre change in sales margins for total petroleum products	+ (-)	\$ 170
One cent (U.S.) a pound change in sales margins for polyethylene	+ (-)	\$ 7
One-quarter percent decrease (increase) in short-term interest rates	+ (-)	\$ 2
Eight cents decrease (increase) in the value of the Canadian dollar versus the U.S. dollar	+ (-)	\$ 260

(a) The amount quoted to illustrate the impact of each sensitivity represents a change of about 10 percent in the value of the commodity or rate in question at the end of 2004. Each sensitivity calculation shows the impact on net income that results from a change in one factor, after tax and royalties and holding all other factors constant. While these sensitivities are applicable under current conditions, they may not apply proportionately to larger fluctuations.

The sensitivity of net income to changes in the Canadian dollar versus the U.S. dollar decreased from year-end 2003 by about \$10 million (after tax) a year for each one-cent change. This is primarily due to the unusually low year-end prices for Cold Lake bitumen, which is sold in U.S. dollars.

Frequently used financial terms

Listed below are definitions of four of Imperial's frequently used financial performance measures. The definitions are provided to facilitate understanding of the terms and how they are calculated.

Capital employed

Capital employed is a measure of net investment. When viewed from the perspective of how capital is used by the business, it includes the company's property, plant and equipment and other assets, less liabilities, excluding both short-term and long-term debt. When viewed from the perspective of the sources of capital employed for the whole company, it includes total debt and shareholders' equity. Both of these views include the company's share of amounts applicable to equity companies.

millions of dollars	2004	2003	2002
Business uses: asset and liability perspective			
Total assets	14 027	12 337	12 003
Less: total current liabilities excluding short-term debt and current portion of long-term debt	(3 582)	(2 817)	(2 671)
Less: total long-term liabilities excluding long-term debt	(2 680)	(2 543)	(2 883)
Add: Imperial's share of equity company debt	56	52	49
Total capital employed	7 821	7 029	6 498

millions of dollars	2004	2003	2002
Total company sources: debt and equity perspective			
Short-term debt and current portion of long-term debt	1 076	573	72
Long-term debt	367	859	1 466
Shareholders' equity	6 322	5 545	4 911
Add: Imperial's share of equity company debt	56	52	49
Total capital employed	7 821	7 029	6 498

Return on average capital employed (ROCE)

ROCE is a financial performance ratio. For each of the company's business segments, ROCE is annual business-segment net income divided by average business-segment capital employed (an average of the beginning- and end-of-year amounts). Segment net income includes Imperial's share of segment net income of equity companies, consistent with the definition used for capital employed, and excludes the cost of financing. The company's total ROCE is net income excluding the after-tax cost of financing divided by total average capital employed. The company has consistently applied its ROCE definition for many years and views it as the best measure of historical capital productivity in a capital-intensive, long-term industry to both evaluate management's performance and demonstrate to shareholders that capital has been used wisely over the long term.

millions of dollars	2004	2003	2002
Net income	2 052	1 705	1 214
Financing costs (after tax), including Imperial's share of equity companies	3	3	15
Net income excluding financing costs	2 055	1 708	1 229
Average capital employed	7 425	6 764	6 141
Return on average capital employed (percent)	27.7	25.3	20.0

Operating costs

Operating costs are the combined total of production, manufacturing, selling, general, exploration, depreciation and depletion expenses from the consolidated statement of income and Imperial's share of similar costs for equity companies. Operating costs are the costs incurred during the period to produce, manufacture and otherwise prepare the company's products for sale – including energy costs, staffing, maintenance, and other costs to explore for and produce oil and gas and operate refining and chemical plants. Delivery costs to customers and marketing expenses are also included. Operating costs exclude the cost of raw materials and those costs incurred in bringing inventory to its existing condition and final storage prior to delivery to a customer. These expenses are on a before-tax basis. While Imperial's management is responsible for all revenue and expense elements of net income, operating costs, as defined below, represent the expenses most directly under management's control.

millions of dollars	2004	2003	2002
Expenses (from page 37)			
Exploration	59	55	30
Production and manufacturing	2 883	2 782	2 320
Selling and general	1 218	1 269	1 222
Depreciation and depletion	908	755	708
Subtotal	5 068	4 861	4 280
Imperial's share of equity company expenses	52	56	49
Total operating costs	5 120	4 917	4 329

Cash flow from operating activities and asset sales

Cash flow from operating activities and asset sales is the sum of the net cash provided by operating activities and proceeds from asset sales reported in the consolidated statement of cash flows. This cash flow is the total source of cash both from operating the company's assets and from the divesting of assets. The company employs a long-standing, disciplined regular review process to ensure that all assets are contributing to the company's strategic and financial objectives. Assets are divested when they no longer meet these objectives or are worth considerably more to others. Because of the regular nature of this activity, management believes it is useful for investors to consider sales proceeds together with cash provided by operating activities when evaluating cash available for investment in the business and financing activities, including shareholder distributions.

millions of dollars	2004	2003	2002
Cash from operating activities	3 312	2 227	1 688
Proceeds from asset sales	102	56	61
Total cash flow from operating activities and asset sales	3 414	2 283	1 749

Supplemental information based on generally accepted accounting principles (GAAP) in Canada

The company's financial summary and management's discussion and analysis, under Canadian GAAP, are not materially different from those reported under U.S. GAAP as shown on pages 20 to 33, except for the following:

Financial summary

millions of dollars	2004	2003	2002	2001	2000
Net income by segment:					
Natural resources	1 487	1 139	1 056	957	1 177
Petroleum products	500	407	127	353	313
Chemicals	100	37	52	23	59
Corporate and other	(54)	99	(11)	(78)	(139)
Net income	2 033	1 682	1 224	1 255	1 410
Total assets	13 992	12 361	11 894	10 781	11 244
Other long-term obligations	1 010	972	1 207	1 098	1 104
Capital employed	8 137	7 262	6 803	5 841	5 635
Cash flow from operating activities and asset sales	3 380	2 250	1 737	2 050	2 363
Per-share information (dollars)					
Net income per share – basic	5.70	4.52	3.23	3.19	3.38
Net income per share – diluted	5.69	4.52	3.23	3.19	3.38

Results of operations

Net income in 2004 was \$2,033 million or \$5.69 a share – the best year on record – compared with \$1,682 million or \$4.52 a share in 2003 (2002 – \$1,224 million or \$3.23 a share). Higher realizations for crude oil, stronger industry refining and petrochemical margins, and higher volumes of Syncrude production, natural gas and petroleum products contributed positively to net income, partly offset by lower marketing margins. Compared with 2003, these favourable operating results were partly offset by the combined negative effects of a higher Canadian dollar on resource and product prices of about \$260 million, the absence of favourable foreign-exchange effects on the company's U.S.-dollar-denominated debt of about \$110 million and lower benefits from tax matters of about \$100 million.

The return on average capital employed was 26 percent, compared with 24 percent in 2003 (2002 – 20 percent).

Natural resources

Net income from natural resources was \$1,487 million, up from \$1,139 million in 2003 (2002 – \$1,056 million). The positive earnings effects of improved realizations for crude oil and natural gas, combined with higher Syncrude, natural gas and natural gas liquids (NGLs) volumes, were partly offset by lower Cold Lake bitumen production, lower benefits from tax matters and the negative effects of a higher Canadian dollar.

Return on average capital employed was 39 percent for the natural resources segment, compared with 32 percent in 2003 (2002 – 36 percent), reflecting higher net income.

Financial statistics

millions of dollars	2004	2003	2002	2001	2000
Net income	1 487	1 139	1 056	957	1 177
Capital employed at December 31	3 920	3 784	3 325	2 580	2 142
Return on average capital employed (percent)	38.6	32.0	35.8	40.5	51.0

Petroleum products

Return on average capital employed was 18 percent for the petroleum products segment, compared with 16 percent in 2003 (2002 – six percent).

Financial statistics

millions of dollars	2004	2003	2002	2001	2000
Capital employed at December 31	2 660	2 784	2 484	2 148	2 280
Return on average capital employed (percent)	18.4	15.5	5.5	15.9	13.9

Chemicals

Return on average capital employed was 41 percent for the chemicals segment, compared with 18 percent in 2003 (2002 – 28 percent).

Financial statistics

millions of dollars	2004	2003	2002	2001	2000
Capital employed at December 31	242	246	178	195	140
Return on average capital employed (percent)	41.0	17.5	27.9	13.7	53.4

Corporate and other

Net income from corporate and other accounts was negative \$54 million in 2004, compared with positive \$99 million in 2003 (2002 – negative \$11 million). Lower net income in 2004 was mainly due to the absence of the favourable foreign-exchange effects on the company's U.S.-dollar-denominated debt, which was replaced with Canadian-dollar-denominated debt in June and July of 2003. Net income for 2004 also included a non-recurring after-tax writedown of \$42 million on a north Toronto property, which was acquired in 1991 to be the company's future Toronto headquarters site. The remeasurement at fair value of this property reflected a change in intended use of the property and management's commitment to sell following the announcement of the relocation of the company's headquarters to Calgary.

Capital and exploration expenditures

Total capital and exploration expenditures were \$1,411 million in 2004, down slightly from \$1,526 million in 2003 (2002 – \$1,600 million).

Management report

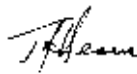

The accompanying consolidated financial statements and all information in this annual report are the responsibility of management. The financial statements have been prepared in accordance with accounting principles generally accepted in the United States of America and Canada and include certain estimates that reflect management's best judgments. Financial information contained throughout this annual report is consistent with the financial statements prepared under United States generally accepted accounting principles. Supplemental information based on Canadian generally accepted accounting principles is provided on page 34.

Management has established and maintains a system of internal controls that provides reasonable assurance that all transactions are accurately recorded, that the financial statements fairly report the company's operating and financial results and that the company's assets are safeguarded. The company's internal audit unit reviews and evaluates the adequacy of and compliance with the company's internal control standards. It is also the company's policy to maintain the highest standard of ethics in all its activities.

Imperial's board of directors has approved the information contained in the financial statements. The board fulfills its responsibility regarding the financial statements mainly

through its audit committee, which is composed of the nonemployee directors. The audit committee reviews the company's annual and quarterly financial statements, accounting practices, business and financial controls, and internal audit program and its findings. It also recommends the external auditors to be appointed by the shareholders at each annual meeting, reviews their audit work plan and approves their fees.

PricewaterhouseCoopers LLP, an independent firm of chartered accountants, was appointed by a vote of shareholders at the company's last annual meeting to examine the consolidated financial statements and provide an independent professional opinion.

Auditors' report

To the shareholders of Imperial Oil Limited

We have audited the consolidated balance sheets of Imperial Oil Limited as at December 31, 2004 and 2003 and the consolidated statements of income, cash flows and shareholders' equity for each of the three years in the period ended December 31, 2004. These financial statements are the responsibility of the company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we plan and perform an audit to obtain reasonable assurance whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation.

In our opinion, these consolidated financial statements present fairly, in all material respects, the financial position of the company as at December 31, 2004 and 2003 and the results of its operations and its cash flows for each of the three years in the period ended December 31, 2004 in accordance with accounting principles generally accepted in the United States of America and Canada.

The information on pages 41 through 56 is part of these consolidated financial statements. Certain figures for prior years have been reclassified in the financial statements to conform with the current year's presentation.

Summary of significant accounting policies

The company's principal business is energy, involving the exploration, production, transportation and sale of crude oil and natural gas and the manufacture, transportation and sale of petroleum products. Imperial is also a major manufacturer and marketer of petrochemicals.

The consolidated financial statements have been prepared in accordance with generally accepted accounting principles (GAAP) in the United States of America. A description of the differences between GAAP in Canada and in the United States as they apply to the company, including a reconciliation of net income, cash flows and impacted balance sheet line items, is provided in note 2. The financial statements include certain estimates that reflect management's best judgment. All amounts are in Canadian dollars unless otherwise indicated.

Principles of consolidation

The consolidated financial statements include the accounts of Imperial Oil Limited and its subsidiaries. Intercompany accounts and transactions are eliminated. Subsidiaries include those companies in which Imperial has both an equity interest and the continuing ability to unilaterally determine strategic operating, investing and financing policies. Significant subsidiaries included in the consolidated financial statements include Imperial Oil Resources Limited, Imperial Oil Resources N.W.T. Limited, Imperial Oil Resources Ventures Limited and McColl-Frontenac Petroleum Inc. All of the above companies are wholly owned. A significant portion of the company's activities in natural resources is conducted jointly with other companies. The accounts reflect the company's share of undivided interest in such activities, including its 25-percent interest in the Syncrude joint venture and its nine-percent interest in the Sable offshore energy project.

Segment reporting

The company operates its business in Canada in the following segments:

Natural resources includes the exploration for and production of crude oil and natural gas.

Petroleum products comprises the refining of crude oil into petroleum products and the distribution and marketing of these products.

Chemicals includes the manufacturing and marketing of various hydrocarbon-based chemicals and chemical products.

The above functions have been defined as the operating segments of the company because they are the segments (a) that engage in business activities from which revenues are earned and expenses are incurred; (b) whose operating results are regularly reviewed by the company's chief operating decision-maker to make decisions about resources to be allocated to the segment and assess its performance; and (c) for which discrete financial information is available.

Corporate and other includes assets and liabilities that do not specifically relate to business segments – primarily cash and long-term debt. Net income in this segment primarily includes financing costs and interest income.

Segment accounting policies are the same as those described in this summary of significant accounting policies. Natural resources, petroleum products and chemicals expenses include amounts allocated from the "corporate and other" segment. The allocation is based on a combination of fee for service, proportional segment expenses and a three-year average of capital expenditures. Transfers of assets between segments are recorded at book amounts. Items included in capital employed that are not identifiable by segment are allocated according to their nature.

Inventories

Inventories are recorded at the lower of cost or net realizable value. The cost of crude oil and products is determined primarily using the last-in, first-out (LIFO) method. LIFO was selected over the alternative first-in, first-out and average cost methods because it provides a better matching of current costs with the revenues generated in the period.

Inventory costs include expenditures and other charges, including depreciation, directly or indirectly incurred in bringing the inventory to its existing condition and final storage prior to delivery to a customer. Selling and general expenses are reported as period costs and excluded from inventory costs.

Investments

The principal investments in companies other than subsidiaries are accounted for using the equity method. They are recorded at the original cost of the investment plus Imperial's share of earnings since the investment was made, less dividends received. Imperial's share of the after-tax earnings of these companies is included in "investment and other income" in the consolidated statement of income. Other investments are recorded at cost. Dividends from these other investments are included in "investment and other income."

These investments represent interests in non-publicly traded pipeline companies that facilitate the sale and purchase of crude oil and natural gas in the conduct of company operations. Other parties who also have an equity interest in these companies share in the risks and rewards according to their percentage of ownership. Imperial does not invest in these companies in order to remove liabilities from its balance sheet.

Property, plant and equipment

Property, plant and equipment is recorded at cost. Investment tax credits and other similar grants are treated as a reduction of the capitalized cost of the asset to which they apply.

The company uses the successful-efforts method to account for its exploration and production activities. Under this method, costs are accumulated on a field-by-field basis with certain exploratory expenditures and exploratory dry holes being expensed as incurred. The company continues to carry as an asset the cost of drilling exploratory wells that find sufficient quantities of reserves to justify their completion as producing wells if the required capital expenditure is made and drilling of additional exploratory wells is underway or firmly planned for the near future. Once exploration activities demonstrate that sufficient quantities of commercially producible reserves have been discovered, continued capitalization is dependent on project reviews, which take place at least annually, to ensure that satisfactory progress toward ultimate development of the reserves is being achieved. Exploratory well costs not meeting these criteria are charged to expense. Costs of productive wells and development dry holes are capitalized and amortized on the unit-of-production method for each field. The company uses this accounting policy instead of the full-cost method because it provides a more timely accounting of the success or failure of the company's exploration and production activities.

Summary of significant accounting policies (continued)

Maintenance and repair costs, including planned major maintenance, are expensed as incurred. Improvements that increase the capacity or prolong the service life of an asset are capitalized.

Production costs are expensed as incurred. Production involves lifting the oil and gas to the surface and gathering, treating, field processing and field storage of the oil and gas. The production function normally terminates at the outlet valve on the lease or field production storage tank. Production costs are those incurred to operate and maintain the company's wells and related equipment and facilities. They become part of the cost of oil and gas produced. These costs, sometimes referred to as lifting costs, include such items as labour costs to operate the wells and related equipment; repair and maintenance costs on the wells and equipment; materials, supplies and energy costs required to operate the wells and related equipment; and administrative expenses related to the production activity.

Depreciation and depletion for assets associated with producing properties begin at the time when production commences on a regular basis. Depreciation for other assets begins when the asset is in place and ready for its intended use. Assets under construction are not depreciated or depleted. Depreciation and depletion are calculated using the unit-of-production method for producing properties based on proved developed reserves. Depreciation of other plant and equipment is calculated using the straight-line method, based on the estimated service life of the asset. In general, refineries are depreciated over 25 years; other major assets, including chemical plants and service stations, are depreciated over 20 years.

Proved oil and gas properties held and used by the company are reviewed for impairment whenever events or changes in circumstances indicate that the carrying amounts may not be recoverable. Assets are grouped at the lowest level for which there are identifiable cash flows that are largely independent of the cash flows of other groups of assets.

The company estimates the future undiscounted cash flows of the affected properties to judge the recoverability of carrying amounts. Cash flows used in impairment evaluations are developed using annually updated corporate plan investment evaluation assumptions for crude oil commodity prices and foreign-currency exchange rates. Annual volumes are based on individual field production profiles, which are also updated annually. Prices for natural gas and other products sold under contract are based on corporate plan assumptions that are developed annually and also used for investment evaluation purposes.

In general, impairment analyses are based on proved reserves. Where probable reserves exist, an appropriately risk-adjusted amount of these reserves may be included in the impairment evaluation. An asset would be impaired if the undiscounted cash flows were less than its carrying value. Impairments are measured by the amount by which the asset's carrying value exceeds its fair value.

Gains or losses on assets sold are included in "investment and other income" in the consolidated statement of income.

Interest capitalization

Interest costs relating to major capital projects under construction are capitalized as part of property, plant and equipment. Capitalization of interest ceases when the property, plant and equipment is substantially complete and ready for its intended use.

Goodwill and other intangible assets

Goodwill and intangible assets with indefinite lives are not subject to amortization. These assets are tested for impairment annually or more frequently if events or circumstances indicate the assets might be impaired. Impairment losses are recognized in current period earnings. The evaluation for impairment of goodwill is based on a comparison of the carrying values of goodwill and associated operating assets with the estimated present value of net cash flows from those operating assets.

Intangible assets with determinable useful lives are amortized over the estimated service lives of the assets. Computer software development costs are amortized over a maximum of 15 years and customer lists are amortized over a maximum of 10 years. The amortization is included in "depreciation and depletion" in the consolidated statement of income.

Asset retirement obligations and other environmental liabilities

Legal obligations associated with site restoration on the retirement of assets with determinable useful lives are recognized when they are incurred, which is typically at the time the assets are installed. The obligations are initially measured at fair value and discounted to present value. A corresponding amount equal to that of the initial obligation is added to the capitalized costs of the related asset. Over time the discounted asset retirement obligation amount will be accreted for the change in its present value, and the initial capitalized costs will be depreciated over the useful lives of the related assets.

No asset retirement obligations are set up for assets with an indeterminate useful life, because such potential obligations cannot be measured since it is not possible to estimate the settlement dates. Provision for environmental liabilities of these and non-operating assets is made when it is probable that obligations have been incurred and the amount can be reasonably estimated. These liabilities are not discounted. Asset retirement obligations and other provisions for environmental liabilities are determined based on engineering estimated costs, taking into account the anticipated method and extent of remediation consistent with legal requirements, current technology and the possible use of the location.

Foreign-currency translation

Monetary assets and liabilities in foreign currencies have been translated at the rates of exchange prevailing on December 31.

Any exchange gains or losses are recognized in net income.

Financial instruments

The fair values of cash, accounts receivable and current liabilities approximate recorded amounts because of the short period to receipt or payment of cash. The fair value of the company's long-term debt is estimated based on quoted market prices for the same or similar issues or on the current rates offered to the company for debt of the same duration to maturity. The fair values of the company's other financial instruments, which are mainly long-term receivables, are estimated primarily by discounting future cash flows, using current rates for similar financial instruments under similar credit risk and maturity conditions.

The company does not use financing structures for the purpose of altering accounting outcomes or removing debt from the balance sheet. The company does not use derivative instruments to speculate on the future direction of currency or commodity prices and does not sell forward any part of production from any business segment.

Revenues

Revenues associated with sales of crude oil, natural gas, petroleum and chemical products and other items are recorded when the products are delivered. Delivery occurs when the customer has taken title and has assumed the risks and rewards of ownership, prices are fixed or determinable and collectibility is reasonably assured. The company does not enter into ongoing arrangements whereby it is required to repurchase its products, nor does the company provide the customer with a right of return.

Revenues include amounts billed to customers for shipping and handling. Shipping and handling costs incurred up to the point of final storage prior to delivery to a customer are included in "purchases of crude oil and products" in the consolidated statement of income. Delivery costs from final storage to customer are recorded as a marketing expense in selling and general expenses.

Revenues include the sales portion of certain transactions where the company contemporaneously negotiates purchases with the same counterparty under contractual arrangements that establish the agreement terms either jointly, in a single contract, or separately in individual contracts. The purchases are recorded in "purchases of crude oil and products." These transactions are commonly called purchase/sale transactions. Together with non-monetary exchanges as well as independently transacted purchases and sales, purchase/sale transactions are used to ensure that the right crude oil is at the appropriate refineries at the right time and the appropriate products are available to meet consumer demands.

Each purchase/sale transaction is composed of a separate purchase and a separate sale transaction and therefore is accounted for as any other independently transacted monetary purchase or sale, measured at fair value as agreed upon by a willing buyer and a willing seller. They are entered into with our normal suppliers and customers for substantive business purposes and physical delivery is required.

The characteristics of these transactions are indistinguishable from those of any other monetary sales transaction. This accounting practice has recently been addressed in EITF Issue 03-11, "Reporting Realized Gains and Losses on Derivative Instruments That Are Subject to FASB Statement No. 133 and Not Held for Trading Purposes as Defined in Issue No. 02-3." While Issue 03-11 addresses the issue of gross versus net classification for derivative instruments, it also provides guidance for purchase/sale transactions that are not accounted for as derivative instruments. In Issue 03-11, the EITF concluded that the determination of whether contracts not held for trading purposes should be reported in the income statement on a gross or net basis is a matter of judgment that depends on the relevant facts and circumstances. In the judgment of management, the relevant facts and circumstances support accounting for these transactions in revenues, measured at fair value.

Stock-based compensation

The company accounts for its stock-based compensation programs, except for the incentive stock options granted in April 2002, by using the fair-value-based method. Under this method, compensation expense related to the units of these programs is measured by the fair value of the liabilities incurred and is recorded in the consolidated statement of income over the vesting period. The fair value of liabilities is remeasured at the end of each reporting period through settlement.

As permitted by the Statement of Financial Accounting Standards No. 123 (SFAS 123), the company continues to apply the intrinsic-value-based method of accounting for the incentive stock options granted in April 2002. Under this method, compensation expense is not recognized on the issuance of stock options as long as the exercise price is equal to the market value at the date of grant.

If the provisions of SFAS 123 had been adopted for all prior years, net income and net income per share would have been as follows:

millions of dollars	2004	2003	2002
Net income as shown in financial statements	2 052	1 705	1 214
Add: stock-based compensation expense as reported, net of tax	84	76	24
Deduct: stock-based compensation expense, net of tax, determined under fair-value-based method	(86)	(81)	(41)
Pro forma net income	2 050	1 700	1 197
Net income per share (dollars)			
As reported – basic	5.75	4.58	3.20
– diluted	5.74	4.58	3.20
Pro forma – basic	5.74	4.57	3.16
– diluted	5.73	4.57	3.16

Consumer taxes

Taxes levied on the consumer and collected by the company are excluded from the consolidated statement of income. These are primarily provincial taxes on motor fuels and the federal goods and services tax.

Total assets (h)	1 382	497	787	14 027	12 337	12 003

(a) A significant portion of activities in the natural resources segment is conducted jointly with other companies. The segment includes the company's share of undivided interest in such activities as follows:

millions of dollars	2004	2003	2002
Total revenues	2 744	2 494	2 357
Total expenses	1 598	1 577	1 520
Net income, after income tax	780	664	557
Total current assets	367	302	321
Long-term assets	4 140	3 553	3 038
Total current liabilities	948	913	669
Other long-term obligations	330	322	293
Cash flow from operating activities	1 188	883	615
Cash (used in) investing activities	(858)	(754)	(601)

(b) Information is presented as though each segment were a separate business activity. Intersegment sales are made essentially at prevailing market prices. Consolidated amounts exclude intersegment transactions, as follows:

millions of dollars	2004	2003	2002
Purchases of crude oil and products	4 849	3 754	3 463
Operating expenses	1	2	1
Total intersegment sales	4 850	3 756	3 464
Intersegment receivables and payables	298	308	352

(c) Includes export sales to the United States, as follows:

millions of dollars	2004	2003	2002
Natural resources	1 360	1 304	942
Petroleum products	1 074	792	723
Chemicals	678	567	520
Total export sales	3 112	2 663	2 185

(d) Consolidated operating, selling and general expenses include delivery costs from final storage areas to customers of \$307 million (2003 – \$285 million, 2002 – \$216 million).

(e) Capital and exploration expenditures of the petroleum products segment include non-cash capital leases of \$11 million in 2004 (2003 – \$22 million).

(f) Includes property, plant and equipment under construction of \$1,983 million (2003 – \$1,426 million).

(g) With the announcement of the relocation of the company's headquarters to Calgary, management has committed to a plan to sell a piece of property in north Toronto, Ontario, acquired in 1991 to be the future Toronto headquarters site. Consistent with the commitment to sell and considering its unique nature, this property, previously reported in the petroleum products segment, is now shown in the corporate and other segment. This change is effective in 2004. Prior periods have not been revised.

(h) Goodwill was not amortized in the past three years. All goodwill has been assigned to the petroleum products segment. There have been no goodwill acquisitions, impairment losses or write-offs due to sales in the past three years.

Notes to consolidated financial statements (continued)

2. Differences between United States and Canadian generally accepted accounting principles

Effective 2004, the company prepares its financial statements in accordance with the generally accepted accounting principles (GAAP) of the United States. Prior to 2004, the company's financial statements were prepared in conformity with Canadian GAAP. A reconciliation of the differences between GAAP in Canada and in the United States as they apply to the company is provided below:

	Reported under U.S. GAAP	Increase/(decrease) due to		Reported under Canadian GAAP
		Capitalized interest	Accounting change	
Consolidated statement of income				
Net income for 2004 (millions of dollars)	2 052	(19)	–	2 033
Net income per common share (dollars)				
Basic	5.75	(0.05)	–	5.70
Diluted	5.74	(0.05)	–	5.69

Total liabilities and shareholders' equity	12 337	(49)	73	12 361

Under U.S. GAAP, interest costs related to major capital projects under construction are required to be capitalized as part of property, plant and equipment. Under Canadian GAAP, the company did not capitalize interest costs for the same projects.

Under U.S. GAAP, the cumulative effect of accounting change for the adoption of the standard on accounting for asset retirement obligations in 2003 was reflected in the consolidated net income for 2003. Under Canadian GAAP, financial statements of prior periods were restated to reflect the effect of the same accounting change.

Under U.S. GAAP, the accumulated benefit obligation (ABO) is the actuarial present value of benefits attributed to employee service rendered up to the end of the year and is based on current compensation levels. Since the amount by which the ABO less the fair value of plan assets was greater than the liability previously recognized in the consolidated balance sheet, an additional minimum pension liability was required. The minimum pension liability has no impact on net income and because this adjustment was non-cash, its effect has been excluded from the accompanying consolidated statement of cash flows. No such adjustment is required under Canadian GAAP.

3. Long-term debt

			2004	2003
issued	maturity date	interest rate	millions of dollars	
2003	\$250 million due May 26, 2005, and \$250 million due August 26, 2005 (a)	Variable	—	500
2003	January 19, 2006 (a)	Variable	318	318
Long-term debt (b)			318	818
Capital leases (c)			49	41
Total long-term debt (d) (e)			367	859

(a) These are long-term variable-rate loans from Exxon Overseas Corporation, an affiliated company of Exxon Mobil Corporation.

(b) Average effective interest rate was 2.5 percent for 2004 (2003 – 2.7 percent).

(c) These obligations primarily relate to the capital lease for marine services, which are provided by the lessor commencing in 2004 for a period of 10 years, extendable for an additional five years. The average imputed interest rate was 10.3 percent in 2004 (2003 – 12.7 percent).

(d) Principal payments on long-term loans of \$318 million are due in 2006. Principal payments on capital leases of approximately \$4 million a year are due in each of the next five years.

(e) These amounts exclude that portion of long-term debt, totalling \$995 million (2003 – \$501 million), which matures within one year and is included in current liabilities.

On May 6, 2004, the company filed a final short-form shelf prospectus in Canada in connection with the issuance of medium-term notes over the 25-month period that the shelf prospectus remains valid. The unsecured notes will be issued from time to time at the discretion of the company in an aggregate amount not to exceed \$1 billion. The company has not issued any notes under this shelf prospectus.

4. Income taxes

millions of dollars	2004	2003	2002
Current income tax expense	1 103	610	718
Deferred income tax expense (a)	(128)	79	(144)
Total income tax expense (b)	975	689	574
Statutory corporate tax rate (percent)	37.0	38.5	42.0
Increase/(decrease) resulting from:			
Non-deductible royalty payments to governments	3.9	5.0	5.4
Resource allowance in lieu of royalty deduction	(7.0)	(7.5)	(11.8)
Manufacturing and processing credit	—	0.2	(0.3)
Enacted tax-rate and tax-law changes	(1.8)	(3.1)	(0.9)
Other	0.1	(4.3)	(2.3)
Effective income tax rate	32.2	28.8	32.1

(a) The deferred income tax expense for the year is the difference in net deferred income tax liabilities at the beginning and end of the year. The provisions for deferred income taxes include net (charges)/credits for the effect of changes in tax laws and rates of \$25 million in 2004 (2003 – \$72 million; 2002 – \$15 million).

(b) Cash outflow from income taxes, plus investment credits earned, was \$641 million in 2004 (2003 – \$573 million; 2002 – \$935 million).

Notes to consolidated financial statements (continued)

Deferred income taxes are based on differences between the accounting and tax values of assets and liabilities. These differences in value are remeasured at each period-end using the tax rates and tax laws expected to apply when those differences are realized or settled in the future. Components of deferred income tax liabilities and assets as at December 31 were:

millions of dollars	2004	2003
Depreciation and amortization	1 287	1 233
Successful drilling and land acquisitions	403	495
Pension and benefits (a)	(343)	(286)
Site restoration	(158)	(167)
Net tax loss carryforwards (b)	(57)	(57)
Capitalized interest	26	16
Other	(3)	(5)
Deferred income tax liabilities	1 155	1 229
LIFO inventory valuation	(343)	(268)
Other	(105)	(85)
Deferred income tax assets	(448)	(353)
Valuation allowance	—	—
Net deferred income tax liabilities	707	876

(a) Income taxes charged directly to shareholders' equity related to minimum pension liability adjustment were \$41 million benefit in 2004 (2003 – \$57 million expense; 2002 – \$155 million benefit).

(b) Tax losses can be carried forward indefinitely.

The operations of the company are complex, and related tax interpretations, regulations and legislation are continually changing. As a result, there are usually some tax matters in question. The company believes the provision made for income taxes is adequate.

5. Reporting of fuel consumed in operations

Beginning in 2004, fuel consumed in operations, previously included in purchases of crude oil and products, has been reclassified as production and manufacturing expenses in the consolidated statement of income. Prior period amounts have been reclassified for comparative purposes. This reclassification has no impact on total expenses and net income or on the cash-flow profile of the company.

6. Headquarters relocation

On September 29, 2004, the company announced its intention to relocate its head office from Toronto, Ontario, to Calgary, Alberta. Completion of the move is expected by August 2005. Severance, relocation and other costs associated with the relocation are expected to be recorded in 2005, consistent with management decisions and the spending profile of these costs.

7. Employee retirement benefits

Retirement benefits, which cover almost all retired employees and their surviving spouses, include pension-income and certain health-care and life-insurance benefits. They are met through funded registered retirement plans and through unfunded supplementary benefits that are paid directly to recipients. Funding of registered retirement plans complies with federal and provincial pension regulations, and the company makes contributions to the plans based upon an independent actuarial valuation.

Pension-income benefits consist mainly of company-paid defined benefit plans that are based on years of service and final average earnings. The company shares in the cost of health-care and life-insurance benefits. The company's benefit obligations are based on the projected benefit method of valuation that includes employee service to date and present compensation levels as well as a projection of salaries and service to retirement.

The expense and obligations for both funded and unfunded benefits are determined in accordance with United States generally accepted accounting principles and actuarial procedures. The process for determining retirement-income expense and related obligations includes making certain long-term assumptions regarding the discount rate, rate of return on plan assets and rate of compensation increases.

The total obligation for retirement benefits exceeded the fair value of plan assets at December 31, 2004, by \$1,712 million (2003 – \$1,357 million), \$1,276 million (2003 – \$975 million) of which was related to pension benefits and \$436 million (2003 – \$382 million) to other post-retirement benefits. The obligation and pension expense can vary significantly with changes in the assumptions used to estimate the obligation and the expected return on plan assets.

Details of the employee retirement benefits plans are as follows:

millions of dollars	Pension benefits			Other post-retirement benefits		
	2004	2003	2002	2004	2003	2002
Components of net benefit cost:						
Current service cost	76	71	64	6	5	4
Interest cost	237	219	222	24	22	21
Expected return on plan assets	(223)	(179)	(191)	—	—	—
Amortization of prior service cost	27	25	25	—	—	—
Recognized actuarial loss/(gain)	68	69	34	4	3	1
Net benefit cost (a)	185	205	154	34	30	26
Change in benefit obligation						
Benefit obligation at January 1	3 761	3 530		382	354	
Current service cost	76	71		6	5	
Interest cost	237	219		24	22	
Amendments	37	—		—	—	
Actuarial loss/(gain)	405	171		47	19	
Benefits paid	(256)	(230)		(23)	(18)	
Benefit obligation at December 31	4 260	3 761		436	382	
Accumulated benefit obligation at December 31	3 743	3 347		—	—	
Change in plan assets						
Fair value of plan assets at January 1	2 786	2 104				
Actual return on plan assets	315	377				
Company contributions	114	511				
Payments directly to participants	25	24				
Benefits paid	(256)	(230)				
Fair value of plan assets at December 31	2 984	2 786				
Excess/(deficiency) of plan assets over benefit obligation	(1 276)	(975)		(436)	(382)	
Unrecognized net actuarial (gain)/loss (b)	1 073	829		95	52	
Unrecognized prior service cost (b)	99	89		—	—	
Net amount recognized	(104)	(57)		(341)	(330)	
Amount recognized in the consolidated balance sheet consists of:						
Accrued benefit cost (note 8)	(759)	(561)		(341)	(330)	
Intangible assets	97	89		—	—	
Accumulated other nonowner changes in equity, minimum pension liability adjustment	558	415		—	—	
Net amount recognized	(104)	(57)		(341)	(330)	
Assumptions						
Assumptions used to determine benefit obligations at December 31 (percent)						
Discount rate	5.75	6.25		5.75	6.25	
Long-term rate of compensation increase	3.50	3.50		3.50	3.50	
Assumptions used to determine net benefit cost for years ended December 31 (percent)						
Discount rate	6.25	6.25	6.75	6.25	6.25	6.75
Long-term rate of compensation increase	3.50	3.50	3.50	3.50	3.50	3.50
Long-term rate of return on funded assets	8.25	8.25	8.25	—	—	—

Notes to consolidated financial statements (continued)

(a) A summary of net benefit cost with elements of employee future benefit costs before and after adjustments to recognize the long-term nature of employee benefit cost is shown in the table below:

millions of dollars	Pension benefits			Other post-retirement benefits		
	2004	2003	2002	2004	2003	2002
Components of net benefit cost:						
Current service cost	76	71	64	6	5	4
Interest cost	237	219	222	24	22	21
Actual return on plan assets	(315)	(377)	107	–	–	–
Plan amendments for prior service	37	–	27	–	–	–
Actuarial loss/(gain)	405	171	196	47	19	25
Elements of employee future benefit costs before adjustments to recognize the long-term nature of employee future benefit costs	440	84	616	77	46	50
Adjustments to recognize the long-term nature of employee future benefit costs:						
Difference between expected return and actual return on plan assets for the year	92	198	(298)	–	–	–
Difference between amortization of prior service costs for the year and actual plan amendments for the year	(10)	25	(2)	–	–	–
Difference between actuarial (gain)/loss recognized for the year and actuarial (gain)/loss on accrued benefit obligation for the year	(337)	(102)	(162)	(43)	(16)	(24)
Net benefit cost	185	205	154	34	30	26

(b) Unrecorded assets/(liabilities) are amortized over the average remaining service life of employees, which for 2005 and subsequent years is 13 years (2004 – 13 years; 2003 – 13.5 years).

Plan assets

The company's pension plan asset allocation at December 31, 2003 and 2004, and target allocation for 2005 are as follows:

Asset category (percent)	Target allocation	Percentage of plan assets at December 31	
	2005	2004	2003
Equities	50 – 75	62	62
Bonds	25 – 50	38	38
Other	0 – 10	–	–
Total		100	100

The company establishes the long-term expected rate of return by developing a forward-looking long-term return assumption for each asset class, taking into account factors such as the expected real return for the specific asset class and inflation. A single, long-term rate of return is then calculated as the weighted average of the target asset allocation and the long-term return assumption for each asset class. The 2004 long-term expected return of 8.25 percent used in the calculations of pension expense compares to an actual rate of return over the past decade of 10.7 percent.

The company's investment strategy for benefit plan assets reflects a long-term view, a careful assessment of the risks inherent in various asset classes and broad diversification to reduce the risk of the total portfolio. The company primarily invests in funds that follow an index-based strategy to achieve its objectives of diversifying risk while minimizing costs. The fund holds Imperial Oil Limited common shares only to the extent necessary to replicate the relevant equity index. Asset-liability studies, or simulations of the interaction of cash flows associated with both assets and liabilities, are periodically used to establish the preferred target asset allocation. The target asset allocation for equity securities reflects the long-term nature of the liability. The balance of the fund is targeted to debt securities.

Cash flows

The following benefit payments, which reflect expected future service, as appropriate, are expected to be paid:

millions of dollars	Pension benefits	Other post-retirement benefits
2005	230	20
2006	234	22
2007	238	24
2008	244	26
2009	251	28
Years 2010 – 2014	1 398	161

In 2005, the company expects to make cash contributions of about \$350 million to its pension plan.

A summary of the change in other nonowner changes in equity related to the minimum pension liability adjustment is shown in the table below.

millions of dollars	2004	Pension benefits 2003	2002
Increase/(decrease) in accumulated other nonowner changes in equity, before tax	(143)	106	(393)
Deferred income tax (charge)/credit (note 4)	41	(57)	155
Increase/(decrease) in accumulated other nonowner changes in equity, after tax	(102)	49	(238)

A summary of pension plans with accumulated benefit obligations in excess of plan assets is shown in the table below:

millions of dollars	2004	Pension benefits 2003
For funded pension plans with accumulated benefit obligations in excess of plan assets:		
Projected benefit obligation	3 876	3 464
Accumulated benefit obligation	3 430	3 126
Fair value of plan assets	2 984	2 786
Accumulated benefit obligation less fair value of plan assets	446	340
For unfunded plans covered by book reserves:		
Projected benefit obligation	384	297
Accumulated benefit obligation	313	221

Additional expenses include contributions to defined contribution plans, primarily the employee savings plan, of \$32 million in 2004 (2003 – \$31 million; 2002 – \$30 million).

The most recent independent actuarial valuation was as of June 30, 2004, and the next required valuation will be as of June 30, 2005. The measurement date used to determine the fair value of plan assets and the benefit obligations was December 31, 2004.

A one-percent change in the assumptions at which retirement liabilities could be effectively settled is shown as follows:

increase/(decrease) millions of dollars	One-percent increase	One-percent decrease
Rate of return on plan assets:		
Effect on net benefit costs	(30)	30
Discount rate:		
Effect on net benefit costs	(45)	50
Effect on benefit obligations	(525)	645
Rate of pay increases:		
Effect on net benefit costs	30	(25)
Effect on benefit obligations	160	(140)

For measurement purposes, a five-percent health-care cost trend rate was assumed for 2004 and thereafter. A one-percent change in the assumed health-care cost trend rate would have the following effects:

increase/(decrease) millions of dollars	One-percent increase	One-percent decrease
Effect on service and interest cost components	4	(3)
Effect on other post-retirement benefit obligations	45	(40)

Notes to consolidated financial statements (continued)

8. Other long-term obligations

millions of dollars	2004	2003
Employee retirement benefits (note 7) (a)	1 052	847
Asset retirement obligations and other environmental liabilities (b)	380	393
Other obligations	93	74
Total other long-term obligations	1 525	1 314

(a) Total recorded employee retirement benefits obligations also include \$48 million in current liabilities (2003 – \$44 million).

(b) Total asset retirement obligations and other environmental liabilities also include \$76 million in current liabilities (2003 – \$69 million). The estimated cash flows of asset retirement obligations have been discounted at six percent. The total undiscounted amount of the estimated cash flows required to settle the obligations is \$970 million. Payments to settle the obligations occur on an ongoing basis and will continue over the lives of the operating assets, which can exceed 25 years. The change in asset retirement obligations liability is as follows:

millions of dollars	2004	2003
Asset retirement obligations liability at January 1	327	341
Additions	16	–
Accretion	22	20
Settlement	(37)	(34)
Asset retirement obligations liability at December 31	328	327

9. Derivatives and financial instruments

No significant energy derivatives, foreign-exchange forward contracts or currency and interest-rate swaps were transacted in the past three years. The company maintains a system of controls that includes a policy covering the authorization, reporting and monitoring of derivative activity.

The fair value of the company's financial instruments is determined by reference to various market data and other appropriate valuation techniques. There are no material differences between the fair values of the company's financial instruments and the recorded book value.

10. Incentive compensation programs

Incentive compensation programs are designed to retain selected employees, reward them for high performance and promote individual contributions to sustained improvement in the company's future business performance and shareholder value.

Incentive share units, deferred share units, earnings bonus units and restricted stock units

Incentive share units have value if the market price of the company's common shares when the unit is exercised exceeds the market value when the unit was issued. The issue price of incentive share units is the closing price of the company's shares on the Toronto Stock Exchange on the grant date. Up to 50 percent of the units may be exercised after one year from issuance; an additional 25 percent may be exercised after two years; and the remaining 25 percent may be exercised after three years. Incentive share units are eligible for exercise up to 10 years from issuance. The units may expire earlier if employment is terminated other than by retirement, death or disability.

The deferred share unit plan is made available to selected executives and nonemployee directors. The selected executives can elect to receive all or part of their performance bonus compensation in units, and the nonemployee directors can elect to receive all or part of their directors' fees in units. The number of units granted to executives is determined by dividing the amount of the bonus elected to be received as deferred share units by the average of the closing prices of the company's shares on the Toronto Stock Exchange for the five consecutive trading days immediately prior to the date that the bonus would have been paid. The number of units granted to a nonemployee director is determined at the end of each calendar quarter by dividing the amount of directors' fees for the calendar quarter that the nonemployee director elected to receive as deferred share units by the average closing price of the company's shares for the five consecutive trading days immediately prior to the last day of the calendar quarter. Additional units are granted based on the cash dividend payable on the company's shares divided by the average closing price immediately prior to the payment date for that dividend and multiplying the resulting number by the number of deferred share units held by the recipient.

Deferred share units cannot be exercised until after termination of employment with the company or resignation as a director and must be exercised no later than December 31 of the year following termination or resignation. On the exercise date, the cash value to be received for the units is determined based on the average closing price of the company's shares for the five consecutive trading days immediately prior to the date of exercise.

The earnings bonus unit plan is available to selected executives. Each earnings bonus unit entitles the recipient to receive an amount equal to the company's cumulative net earnings per common share as announced each quarter beginning after the grant. Payout occurs on the fifth anniversary of the grant or when the maximum settlement value per unit is reached, if earlier. Earnings bonus units may expire if employment is terminated other than by death or disability.

Under the restricted stock unit plan, each unit entitles the recipient to the conditional right to receive from the company, upon exercise, an amount equal to the closing price of the company's common shares on the Toronto Stock Exchange on the exercise dates. Fifty percent of the units are exercised three years following the grant date, and the remainder are exercised seven years following the grant date. The units may be exercised early in the event of death or disability.

All units require settlement by cash payments with one exception. The restricted stock unit plan was amended for units granted in 2003 and future years by providing that the recipient may receive one common share of the company per unit or elect to receive the cash payment for the units to be exercised on the seventh anniversary of the grant date. The maximum number of common shares that may be issued under the restricted stock unit plan is 3.5 million.

For deferred share units, a charge is made to expense in the year of grant equal to the cash performance bonus payment and directors' fees foregone. The company records expense for incentive share, deferred share and restricted stock units based on changes in the price of common shares in the year. Expense for earnings bonus units is recorded based on the cumulative net earnings per outstanding common share from issue date, up to the maximum settlement value for the units.

Incentive stock options

In April 2002, incentive stock options were granted for the purchase of the company's common shares at an exercise price of \$46.50 per share. Up to 50 percent of the options may be exercised on or after January 1, 2003, a further 25 percent may be exercised on or after January 1, 2004, and the remaining 25 percent may be exercised on or after January 1, 2005. Any unexercised options expire after April 29, 2012. The company has not issued incentive stock options since 2002 and has no plans to issue incentive stock options in the future.

The company does not recognize compensation expense on the issuance of stock options because the exercise price is equal to the market value at the date of grant. If the fair-value-based method of accounting had been adopted, the impact on net income and earnings per share would be as shown in the summary of significant accounting policies on page 43. The average fair value of each option granted during 2002 was \$12.70. The fair value was estimated at the grant date using an option-pricing model with the following weighted average assumptions: risk-free interest rate of 5.7 percent, expected life of five years, volatility of 25 percent and a dividend yield of 1.9 percent.

The company has purchased shares on the market to fully offset the dilutive effects from the exercise of stock options. This practice is expected to continue.

A summary of the incentive compensation programs is as follows:

	Number of units			Outstanding at December 31	Expensed in period (millions of dollars)	Obligations outstanding at December 31 (millions of dollars)
	Granted	Exercised	Cancelled or adjusted			
Incentive share units						
2004	–	(1 619 907)	(3 000)	5 266 423	94	245
2003	–	(1 142 145)	19 225	6 889 330	109	216
2002	7 000	(812 550)	(5 325)	8 012 250	39	142
Deferred share units						
2004	4 899	–	–	48 810	1	4
2003	8 253	(49 486)	(379)	43 911	1	3
2002	7 479	(9 853)	–	85 523	–	4
Earnings bonus units						
2004	1 889 740	(1 139 160)	–	3 984 830	7	6
2003	2 221 580	(1 156 370)	–	3 234 250	3	3
2002	1 036 500	–	–	2 169 040	3	3
Incentive stock options						
2004	–	(274 250)	(7 400)	2 854 500	–	–
2003	–	(49 050)	(11 500)	3 136 150	–	–
2002	3 210 200	–	(13 500)	3 196 700	–	–
Restricted stock units						
2004	987 480	–	(5 710)	2 642 325	31	41
2003	872 085	(3 300)	(120)	1 660 555	11	11
2002	791 890	–	–	791 890	–	–

11. Investment and other income

Investment and other income includes gains and losses on asset sales as follows:

millions of dollars	2004	2003	2002
Proceeds from asset sales	102	56	61
Book value of assets sold	59	44	56
Gain/(loss) on asset sales, before tax	43	12	5
Gain/(loss) on asset sales, after tax	32	10	4

Notes to consolidated financial statements (continued)

Investment and other income also includes a non-recurring loss of \$53 million (\$42 million after income taxes) from the remeasurement at fair value of the north Toronto, Ontario, property described in note 1. The change in intended use of the property, together with management's commitment to sell, led to the remeasurement. The fair value of the property was determined using valuation techniques consistent with a market approach, adjusted as appropriate for differences.

12. Commitments and contingent liabilities

At December 31, 2004, the company had commitments for noncancellable operating leases and other long-term agreements that require the following minimum future payments:

millions of dollars	2005	2006	2007	2008	2009	After 2009
Operating leases (a)	62	55	47	41	38	91
Unconditional purchase obligations (b)	102	42	42	42	42	55
Firm capital commitments (c)	119	24	8	13	7	—
Other long-term agreements (d)	241	196	62	61	59	198

(a) Total rental expense incurred for operating leases in 2004 was \$104 million (2003 – \$124 million; 2002 – \$124 million), which included minimum rental expenditures of \$77 million (2003 – \$93 million; 2002 – \$91 million). Related rental income was not material.

(b) Unconditional purchase obligations are those long-term commitments that are noncancellable or cancellable only under certain conditions. These mainly pertain to pipeline throughput agreements. Total payments under unconditional purchase obligations were \$117 million in 2004 (2003 – \$114 million; 2002 – \$115 million).

(c) Firm capital commitments related to capital projects, shown on an undiscounted basis, totalled approximately \$171 million at the end of 2004 (2003 – \$189 million). The largest commitment outstanding at year-end 2004 was associated with the company's share of upstream capital projects of \$112 million at Syncrude and offshore Canada's East Coast.

(d) Other long-term agreements include primarily raw material supply and transportation services agreements. Total payments under other long-term agreements were \$355 million in 2004 (2003 – \$332 million; 2002 – \$288 million). Payments under other long-term agreements related to the company's share of undivided interest in activities conducted jointly with other companies are approximately \$37 million per year.

Other commitments arising in the normal course of business for operating and capital needs do not materially affect the company's consolidated financial position.

The company was contingently liable at December 31, 2004, for a maximum of \$175 million relating to guarantees for purchasing operating equipment and other assets from its rural marketing associates upon expiry of the associate agreement or the death or resignation of the associate. The company expects that the fair value of the operating equipment and other assets so purchased would cover the maximum potential amount of future payments under the guarantees.

The company provides in its financial statements for asset retirement obligations and other environmental liabilities (see accounting policies on page 42). Provision is not made with respect to those manufacturing, distribution and marketing facilities with indeterminate useful lives, because such potential obligations cannot be measured since it is not possible to estimate the settlement dates. These are primarily currently operated sites. These costs are not expected to have a material effect on the company's current consolidated financial position.

Various lawsuits are pending against Imperial Oil Limited and its subsidiaries. Based on a consideration of all relevant facts and circumstances, the company does not believe the ultimate outcome of any currently pending lawsuits against the company will have a material adverse effect upon the company's operations or financial condition. There are no events or uncertainties known to management beyond those already included in reported financial information that would indicate a material change in future operating results or financial condition.

13. Common shares

The number of authorized common shares of the company as at December 31, 2004, was 450,000,000, unchanged from January 1, 2003.

From 1995 to 2003, the company purchased shares under nine 12-month normal course share-purchase programs, as well as an auction tender. On June 23, 2004, another 12-month normal course share-purchase program was implemented with an allowable purchase of 17.9 million shares (five percent of the total at June 21, 2004), less any shares purchased by the employee savings plan and company pension fund. The results of these activities are shown below.

Year	Purchased shares	Millions of dollars
1995 to 2002	202 661 201	5 169
2003	16 259 538	799
2004	13 606 712	872
Cumulative purchases to date	232 527 451	6 840

Exxon Mobil Corporation's participation in the above maintained its ownership interest in Imperial at 69.6 percent.

The company's common share activities are summarized below:

	Thousands of shares	At stated value, millions of dollars
Balance as at January 1, 2002	379 159	1 941
Issued for cash under the stock option plan	—	—
Purchases	(296)	(2)
Balance as at December 31, 2002	378 863	1 939
Issued for cash under the stock option plan	49	2
Purchases	(16 259)	(82)
Balance as at December 31, 2003	362 653	1 859
Issued for cash under the stock option plan	274	13
Purchases	(13 607)	(71)
Balance as at December 31, 2004	349 320	1 801

The following table provides the calculation of basic and diluted earnings per share:

	2004	2003	2002
Net income per common share – basic			
Income before cumulative effect of accounting change (millions of dollars)	2 052	1 701	1 214
Net income (millions of dollars)	2 052	1 705	1 214
Weighted average number of common shares outstanding (thousands of shares)	356 834	372 011	378 875
Net income per common share (dollars)			
Income before cumulative effect of accounting change	5.75	4.57	3.20
Cumulative effect of accounting change, after income tax	—	0.01	—
Net income	5.75	4.58	3.20
Net income per common share – diluted			
Income before cumulative effect of accounting change (millions of dollars)	2 052	1 701	1 214
Net income (millions of dollars)	2 052	1 705	1 214
Weighted average number of common shares outstanding (thousands of shares)	356 834	372 011	378 875
Effect of employee stock-based awards (thousands of shares)	818	143	1
Weighted average number of common shares outstanding, assuming dilution (thousands of shares)	357 652	372 154	378 876
Net income per common share (dollars)			
Income before cumulative effect of accounting change	5.74	4.57	3.20
Cumulative effect of accounting change, after income tax	—	0.01	—
Net income	5.74	4.58	3.20

14. Miscellaneous financial information

In 2004, net income included an after-tax gain of \$23 million (2003 – \$9 million gain; 2002 – \$2 million loss) attributable to the effect of changes in last-in, first-out (LIFO) inventories. The replacement cost of inventories was estimated to exceed their LIFO carrying values at December 31, 2004, by \$1,013 million (2003 – \$797 million). Inventories of crude oil and products at year-end consisted of the following:

millions of dollars	2004	2003
Crude oil	165	161
Petroleum products	190	175
Chemical products	59	57
Natural gas and other	18	14
Total inventories of crude oil and products	432	407

Research and development costs in 2004 were \$70 million (2003 – \$63 million; 2002 – \$64 million) before investment tax credits earned on these expenditures of \$7 million (2003 – \$10 million; 2002 – \$10 million). The net costs are included in expenses due to the uncertainty of future benefits.

Cash flow from operating activities included dividends of \$18 million received from equity investments in 2004 (2003 – \$15 million; 2002 – \$18 million).

Notes to consolidated financial statements (continued)

15. Financing costs

millions of dollars	2004	2003	2002
Debt-related interest	37	38	40
Capitalized interest	(34)	(33)	(12)
Net interest expense	3	5	28
Other interest	4	4	2
Total interest expense (a)	7	9	30
Foreign-exchange expense/(gain) on long-term debt	—	(129)	(10)
Total financing costs	7	(120)	20

(a) Cash interest payments in 2004 were \$41 million (2003 – \$38 million; 2002 – \$41 million). The weighted-average interest rate on short-term borrowings in 2004 was 2.3 percent (2003 – 3.1 percent).

16. Transactions with related parties

Revenues and expenses of the company also include the results of transactions with Exxon Mobil Corporation and affiliated companies (ExxonMobil) in the normal course of operations. These were conducted on terms as favourable as they would have been with unrelated parties and primarily consisted of the purchase and sale of crude oil, petroleum and chemical products, as well as transportation, technical and engineering services. Transactions with ExxonMobil also included amounts paid and received in connection with the company's participation in a number of natural resource activities conducted jointly in Canada. The company has agreements with affiliates of Exxon Mobil Corporation to provide computer and customer support services to the company and to share common business and operational support services to allow the companies to consolidate duplicate work and systems. The amounts paid or received have been reflected in the statement of income as shown below.

millions of dollars	2004	2003	2002
Total revenues	1 580	950	1 036
Purchases of crude oil and products	3 133	2 464	2 134
Total expenses	43	14	57

Accounts payable due to Exxon Mobil Corporation at December 31, 2004, with respect to the above transactions were \$67 million (2003 – \$167 million).

Certain charges from ExxonMobil have been capitalized; they are not material in the aggregate.

During 2003, the company borrowed \$818 million (Cdn) from Exxon Overseas Corporation under two long-term loan agreements as presented in note 3. Interest paid on the loans in 2004 was \$20 million (2003 – \$14 million).

During 2004, the company extended loans of \$32 million to Montreal Pipe Line Limited, in which the company has an equity interest, for financing of the equity company's capital expenditure programs and working capital requirements.

17. Net payments/payables to governments

millions of dollars	2004	2003	2002
Current income tax expense (note 4)	1 103	610	718
Federal excise tax	1 264	1 254	1 231
Property taxes included in expenses	85	80	85
Payroll and other taxes included in expenses	50	52	51
GST/QST/HST collected (a)	2 297	2 015	1 717
GST/QST/HST input tax credits (a)	(1 948)	(1 705)	(1 368)
Other consumer taxes collected for governments	1 670	1 662	1 589
Crown royalties	472	418	314
Total paid or payable to governments	4 993	4 386	4 337
Less investment tax credits and other receipts	14	30	12
Net paid or payable to governments	4 979	4 356	4 325
Net payments to:			
Federal government	2 472	2 061	2 171
Provincial governments	2 422	2 215	2 069
Local governments	85	80	85
Net paid or payable to governments	4 979	4 356	4 325

(a) The abbreviations refer to the federal goods and services tax, the Quebec sales tax and the federal/provincial harmonized sales tax, respectively. The HST is applicable in the provinces of Nova Scotia, New Brunswick and Newfoundland and Labrador.

Natural resources segment – supplemental information

Pages 57 to 59 provide information about the natural resources segment (see note 1, page 44). The information excludes items not related to oil and natural gas extraction such as administrative and general expenses, pipeline operations, gas plant processing fees and gains or losses on asset sales.

In addition to proved oil and gas reserves, the company has a 25-percent interest in proved synthetic crude oil reserves in the Syncrude project. For internal management purposes, the company views these reserves and their development as an integral part of its total natural resources operations. However, for financial reporting purposes, these reserves are required to be reported separately from the oil and gas reserves as shown on page 59.

The synthetic crude oil reserves are not considered in the standardized measure of discounted future cash flows for oil and gas reserves on page 58. The company's share of Syncrude's results of operations, capital and exploration expenditures and property, plant and equipment is also excluded from the following tables on this page.

Results of operations

millions of dollars	Oil and gas		
	2004	2003	2002
Sales to customers	2 160	2 067	1 485
Intersegment sales	976	665	797
Total sales (a)	3 136	2 732	2 282
Production expenses	915	926	736
Exploration expenses	44	55	30
Depreciation and depletion	565	463	426
Income taxes	532	364	350
Results of operations	1 080	924	740

Capital and exploration expenditures

millions of dollars	Oil and gas		
	2004	2003	2002
Property costs (b)			
Proved	–	–	13
Unproved	1	2	5
Exploration costs	43	55	34
Development costs	408	339	469
Total capital and exploration expenditures	452	396	521

Property, plant and equipment

millions of dollars	Oil and gas	
	2004	2003
Property costs (b)		
Proved	3 328	3 332
Unproved	141	163
Producing assets	6 099	5 775
Support facilities	122	125
Incomplete construction	235	200
Total cost	9 925	9 595
Accumulated depreciation and depletion	6 514	6 012
Net property, plant and equipment	3 411	3 583

(a) Sales of crude oil to consolidated affiliates are at market value, using posted field prices. Sales of natural gas liquids to consolidated affiliates are at prices estimated to be obtainable in a competitive, arm's-length transaction. Total sales exclude the sale of natural gas and natural gas liquids purchased for resale, as well as royalty payments. These items are reported gross in note 1 in "total revenues" and in "purchases of crude oil and products."

(b) "Property costs" are payments for rights to explore for petroleum and natural gas and for purchased reserves (acquired tangible and intangible assets such as gas plants, production facilities and producing-well costs are included under "producing assets"). "Proved" represents areas where successful drilling has delineated a field capable of production. "Unproved" represents all other areas.

Natural resources segment – supplemental information (continued)

Standardized measure of discounted future cash flows

As required by the Financial Accounting Standards Board, the standardized measure of discounted future net cash flows is computed by applying year-end prices, costs and legislated tax rates and a discount factor of 10 percent to net proved reserves. The standardized measure includes costs for future dismantlement, abandonment and rehabilitation obligations. The company believes the standardized measure does not provide a reliable estimate of the company's expected future cash flows to be obtained from the development and production of its oil and gas properties or of the value of its proved oil and gas reserves. The standardized measure is prepared on the basis of certain prescribed assumptions including year-end prices, which represent a single point in time and therefore may cause significant variability in cash flows from year to year as prices change. The table below excludes the company's interest in Syncrude.

Standardized measure of discounted future net cash flows related to proved oil and gas reserves

millions of dollars	Oil and gas		
	2004	2003	2002
Future cash flows	11 625	27 611	35 811
Future production costs	(3 123)	(10 871)	(8 940)
Future development costs	(1 492)	(3 084)	(3 117)
Future income taxes	(2 260)	(5 543)	(9 107)
Future net cash flows	4 750	8 113	14 647
Annual discount of 10 percent for estimated timing of cash flows	(1 433)	(3 375)	(6 446)
Discounted future cash flows	3 317	4 738	8 201

Changes in standardized measure of discounted future net cash flows related to proved oil and gas reserves

millions of dollars	Oil and gas		
	2004	2003	2002
Balance at beginning of year	4 738	8 201	2 789
Changes resulting from:			
Sales and transfers of oil and gas produced, net of production costs	(2 240)	(2 075)	(1 645)
Net changes in prices, development costs and production costs	(3 692)	(4 395)	9 276
Extensions, discoveries, additions and improved recovery, less related costs	(43)	22	34

End of year 2004	115	232	347	791	757

(a) Net reserves are the company's share of reserves after deducting the shares of mineral owners or governments or both. All reported reserves are located in Canada. Reserves of natural gas are calculated at a pressure of 14.73 pounds per square inch at 60 degrees Fahrenheit.

The above information describes changes during the years and balances of proved oil and gas and synthetic crude oil reserves at year-end 2002, 2003 and 2004. The definitions used for oil and gas reserves are in accordance with the U.S. Securities and Exchange Commission's (SEC) Rule 4-10 (a) of Regulation S-X, paragraphs (2), (3) and (4).

Crude oil and natural gas reserve estimates, excluding Syncrude, are based on geological and engineering data, which have demonstrated with reasonable certainty that these reserves are recoverable in future years from known reservoirs under existing economic and operating conditions; i.e., prices and costs as of the date the estimate is made. Reserves of crude oil at Cold Lake are those estimated to be recoverable from the Leming plant and commercial phases 1 through 13. Estimates of synthetic crude oil reserves are based on detailed geological and engineering assessments of in-place crude bitumen volumes, the mining plan, historical extraction recovery and upgrading yield factors, installed plant operating capacity and operating approval limits.

In compliance with SEC regulatory guidance, the company has reported 2004 reserves on the basis of the day of December 31, 2004, prices and costs ("year-end prices"). Resultant changes in Cold Lake bitumen and the associated natural gas reserves from the year-end 2003 reserves estimates, which were based on long-term projections of oil and gas prices consistent with those used in the company's investment decision-making process, are shown in the line "Year-end price/cost revisions." The requirement to use year-end prices for reserves estimation introduces single-day price focus and volatility in the valuation of reserves to be produced over the next 20 to 30 years. The company believes that this approach is inconsistent with the long-term nature of the natural resources business. The use of prices from a single date is not relevant to the investment decisions made by the company and annual variations in reserves based on such year-end prices are not of consequence in how the business is managed.

The impact of year-end prices on reserves estimation is most clearly shown at Cold Lake where proved bitumen and associated natural gas reserves were reduced by about 485 million oil-equivalent barrels as a result of using December 31, 2004, prices, which were unusually low. Prices quickly rebounded from December 31, and through January 2005 returned to levels that have restored the reserves to the proved category.

Performance-related revisions can include upward or downward changes in previously estimated volumes of proved reserves for existing fields due to the evaluation or revaluation of (1) already available geologic, reservoir or production data, or (2) new geologic or reservoir data. Performance-related revisions can also include changes associated with the performance of improved recovery projects and significant changes in either development strategy or production equipment/facility capacity. During the past five years, performance-related revisions averaged an upward adjustment of 16 million oil-equivalent barrels per year.

Net proved reserves are determined by deducting the estimated future share of mineral owners or governments or both. For conventional crude oil (excluding enhanced oil-recovery projects) and natural gas, net proved reserves are based on estimated future royalty rates representative of those existing as of the date the estimate is made. Actual future royalty rates may vary with production and price. For enhanced oil-recovery projects, Syncrude and Cold Lake, net proved reserves are based on the company's best estimate of average royalty rates over the life of each project. Actual future royalty rates may vary with production, price and costs.

Reserves data do not include certain resources of crude oil and natural gas such as those discovered in the Beaufort Sea-Mackenzie Delta and the Arctic islands, or the resources contained in oil sands other than those attributable to Syncrude, the Cold Lake Leming plant and phases 1 through 13 of Cold Lake production operations.

Oil-equivalent barrels (OEB) may be misleading, particularly if used in isolation. An OEB conversion ratio of 6,000 cubic feet to one barrel is based on an energy-equivalency conversion method primarily applicable at the burner tip and does not represent a value equivalency at the well head. No independent qualified reserves evaluator or auditor was involved in the preparation of the reserves data.

(a) Exxon Mobil Corporation owns 69.6 percent of Imperial's shares.

(b) Closing share price at December 31 at the Toronto Stock Exchange, divided by net earnings per share – basic and diluted.

(c) The fourth-quarter dividend is paid on January 1 of the succeeding year.

Information for security holders outside Canada

Cash dividends paid to shareholders resident in countries with which Canada has an income-tax convention are usually subject to a Canadian nonresident withholding tax of 15 percent.

The withholding tax is reduced to five percent on dividends paid to a corporation resident in the United States that owns at least 10 percent of the voting shares of the company.

Imperial Oil Limited is a qualified foreign corporation for purposes of the reduced U.S. capital gains tax rates (15 percent and five percent for certain individuals) that are applicable to dividends paid by U.S. domestic corporations and qualified foreign corporations.

There is no Canadian tax on gains from selling shares owned by nonresidents not carrying on business in Canada.

Valuation day price

For capital gains purposes, Imperial's common shares were quoted at \$10.50 a share on December 31, 1971, and \$15.29 on February 22, 1994. Both amounts are restated for the 1998 three-for-one share split.

Ridgefield Park, New Jersey, U.S.A. 07660
Telephone: 1-800-526-0801

Dividend reinvestment and share-purchase plan

This plan provides shareholders with two ways to add to their shareholdings at a reduced cost. The plan enables shareholders to reinvest their cash dividends in additional shares at an average market price. Shareholders can also invest between \$50 and \$5,000 each calendar quarter in additional shares at an average market price.

Funds directed to the dividend reinvestment and share purchase plan are used to buy existing shares on a stock exchange rather than newly issued shares.

Corporate profile

Imperial Oil Limited has been a leading member of the Canadian energy industry for 125 years and is well positioned to deliver long-term shareholder value by participating in some of the industry's most promising growth opportunities.

One of the largest producers of crude oil and natural gas liquids in Canada and a major producer of natural gas, the company is Canada's largest refiner and marketer of petroleum products – sold primarily under the Esso brand name – and a major producer of petrochemicals.

Imperial on-line

The company's Web site contains a wealth of information for investors and others seeking to evaluate Imperial's performance and prospects: the latest news releases, the most recent reports and presentations, information about dividends and taxes, key dates, historical share information, contact numbers and a frequently updated stock-price feed from the Toronto Stock Exchange (TSX) – all this and more is gathered in one convenient location.

Information on products and services, career opportunities, corporate citizenship, donations and sponsorships, coast-to-coast operations and the company's history is also available by visiting www.imperialoil.ca.
